Description: HYDRAULIC CYLINDER ASSEMBLY

HIGHLINE MFG INC 49032

Part No: 49032

Rev: A

2. President's Message

Congratulations on your purchase of the *Bale Pro 7800*! Bale Pro, a proven name in livestock feed handling equipment, is manufactured by Highline Mfg. Inc. A company with a manufacturing team that has over 25 years experience in the farm implement industry.

This operator's manual has been prepared to provide information necessary for safe and efficient operation of your *Bale Pro 7800*. In the manual you will find safety procedures, maintenance routines and detailed parts diagrams.

The *Bale Pro 7800* was designed for controlled, more aggressive processing with less bunching. A little time and effort spent in proper maintenance will increase the performance and durability of your bale processor.

In order to maintain high standards, improvements are made from time to time. Highline Mfg. Inc. reserves the right to make those changes and improvements when practical to do so without incurring any obligation to make such changes and improvements on machines sold previously.

Should the need arise, this manual will assist you in acquiring replacement parts. Should your dealer not have the parts you require in stock, the dealer will be happy to order them for you. Also if you should find that you require information not covered in this manual, feel free to consult your local dealer or Highline.

Highline Mfg. Inc. thanks and congratulates you for selecting a *Bale Pro 7800* as the machine of your choice.

Sincerely,

Raymond J. Bussière, President

PO Box 307, Vonda, Saskatchewan, S0K 4N0
Phone 1-800-665-2010 Fax (306) 258-2010
Internet Address: <http://www.highlinemfg.com>

3. Safety Precautions**WORK SAFELY - FOLLOW THESE RULES**

CAREFUL OPERATION IS THE BEST INSURANCE AGAINST AN ACCIDENT
--

- Keep children and adults away from discharge area while processing.
- Know the controls and what they do.
- Check machine to ensure nothing restricts moving or rotating parts.
- Ensure PTO is disengaged before starting tractor.
- Never leave tractor while PTO is engaged.
- Lower forks to ground after operation.
- Never attempt to manually remove debris while PTO is activated.
- Do not transport Bale Pro on highway with CV extension shaft on machine or with bales in tub or on the forks
- Disconnect CV before unplugging or adjusting processor.
- Always keep safety shields in place.
- Relieve pressure in hydraulic lines before disconnecting lines or performing other work on the hydraulic system.
- Never allow anyone to stand behind processor while loading bales.

Before operating the Bale Pro 7800, be sure to review all the instructions and familiarize yourself with the processor's features.

4. Operating Instructions

Successful operation of the Bale Pro 7800 is dependent upon the quality of the bale, height of the feed rollers and flail guard and also on the operator. The following steps ensure proper operation. Please read carefully before operating your Bale Pro 7800.

1. Ensure that drawbar on tractor is extended such that the pin is 17 inches from the groove on the PTO on tractor.
2. It is recommended that hitch tongue is placed in the second hole from the top of the BP7800 hitch frame. This will ensure proper drawbar location and extend the life of the CV.
3. Ensure that the machine is properly greased at all locations (see pages 6 and 7).
4. Position the discharge deflector by means of the Adjusting handle in the upper position for bedding, and in the lower position for windrow feeding (figure 1).
5. Adjust the flail guard rods by the raising or lowering the adjusting handle (figure 1). With the handle at its highest position, the Bale Pro will process very aggressively. Lowering the handle will decrease the aggressiveness of the processor.

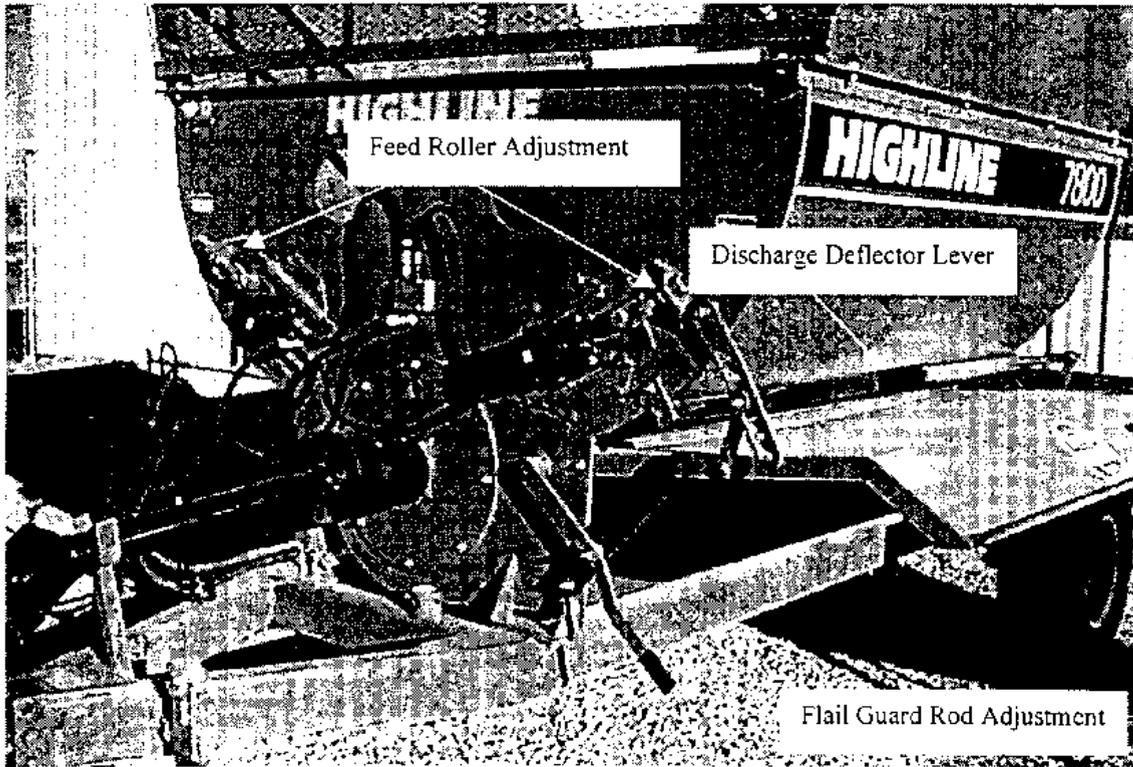

Figure 1 Manual Controls

NOTE: If the processor is too aggressive, the flails will slap back on the flail drum. Continued “backslap” can cause damage to the flail drum, flails and flail bushings. Therefore, avoid excessive “backslap” whenever possible by adjusting the flail guard rods.

6. Adjust the feed rollers with the feed roller adjusting rods to accommodate the bale size. Generally the feed rollers should be raised for larger bales and lowered for smaller bales. Major adjustments may effect the aggressiveness of the processor.
7. Before loading bale, engage PTO to ensure that the flail drum is operating properly. Start feed rollers using the hydraulic controls and check if the feed rollers turn in both directions. If your tractor has hydraulic flow control, alter flow so the feed rollers rotate at an adequate speed for the condition of your bales.
8. To load, lower forks **completely** and back up to bale **slowly**. Raise forks until bale falls into the processor. Another bale may be loaded onto the forks while a bale is in the processor. If a bale is loaded on the forks while one is shredded, raise the forks as high as possible, making sure that the bale on the forks does not interfere with the bale in the tub. This will reduce pressure on the hydraulic cylinder lift assembly. Orientation of the bale during loading causes the hay/straw to discharge from the processor differently. If the bale is shredded in the same direction as it was baled, the hay/straw will generally come off in layers. If the bale is shredded in the opposite way, feeding may be uneven.

- **Do not dislodge frozen bales with forks, otherwise damage to the lift mechanism may result**
9. When ready, engage tractor PTO at idle. Increase PTO speed until it reaches 1000 RPM. Make sure that before PTO is engaged, the forks are not interfering with the bale in the tub. To process, rotate the bale by means of the feed rollers. If the bale stops rotating, reverse the direction of the feed rollers.
 10. Before stopping CV, idle tractor down to reduce flail "back slap".

WARNING: Warranty will be void if any component of this machine is altered or modified in any way, unless written permission is given by Highline Mfg. Inc.

5. Maintenance

Please follow these maintenance steps, to ensure trouble free operation of your Bale Pro 7800

General Maintenance

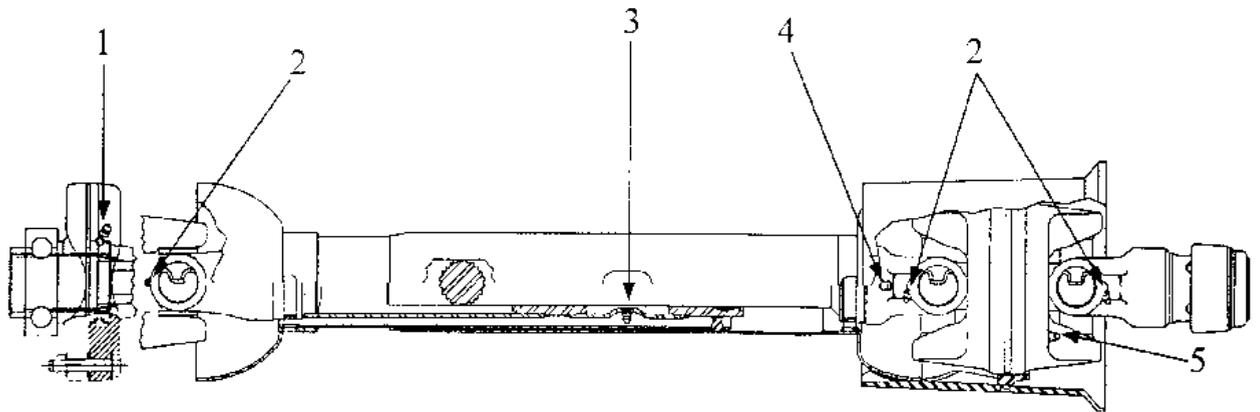

- Twine must be removed from the flail drum **at least** every 25 bales. Premature bearing failure may occur if the twine is allowed to build up on the drum.
- Flail bolts should be tightened after the first ten bales then rechecked after approximately 200 bales
- Pipe Clamps (page 22) should be checked every 50 bales, and tightened if necessary

Lubrication

Maintaining proper lubrication of the Bale Pro 7800 is crucial for trouble free operation. Figures 4 and 5 points which require regular greasing. Below is a list of the lubrication points and the frequency of greasing of these points.

- | | |
|---|---|
| <p>1. Ball Shear Assembly
Grease every 8 hours.</p> <p>2. Cross and Bearing
Grease every 8 hours.</p> <p>3. Telescopic Members
Grease every 8 hours.</p> <p>4. Ball and Socket
Grease every 8 hours.</p> <p>5. Center Housing
Grease every 24 hours.</p> <p>6. Flail Drum Bearing (Front and Rear)
Grease every fifty bales</p> | <p>7. Feed Rollers (Left and Right)
Grease every one hundred bales.</p> <p>8. Pipe Clamps (Left and Right)
Grease every one hundred bales.</p> <p>9. Wheel Hub (Left and Right)
Grease every one hundred bales.</p> <p>10. Forks (Left and Right)
Grease every one hundred bales.</p> |
|---|---|

Note: When CV is under constant angle applications, there must be a lube interval of 4 hours for 1 through 5

Use low-temperature grease when the temperature reaches below 0 degrees Celsius (32 degrees Fahrenheit)
