Safety Precautions

WORK SAFELY – FOLLOW THESE INSTRUCTIONS

CAREFUL OPERATION IS THE BEST INSURANCE AGAINST AN ACCIDENT!

- Always disengage the PTO and hydraulic motors before dismounting tractor. Always ensure PTO is disengaged before starting tractor.
- Keep yourself and others clear of rotating parts to prevent injury.
- Never allow anyone to stand near the Bale Mover while loading or unloading bales.
- Never attempt to manually remove bales from rails while hydraulic motors are engaged. Disconnect hydraulic motors before cleaning the Bale Mover.
- Remove transport locks before lowering forks. To remove transport locks, raise forks to slacken the transport chain and then remove the transport pin. **DO NOT** lower the forks when transport locks are in position otherwise **SEVERE DAMAGE WILL OCCUR!**
- Relieve pressure in hydraulic lines before disconnecting lines or performing maintenance on the hydraulic system.

1.0 Operating Instructions

1.1 Pre-Start Instructions

Transport chains need to be removed before operation of the forks. To remove transport chains, raise forks slightly and remove transport pins. DO NOT lower forks when transport chains are in position otherwise severe damage WILL occur.

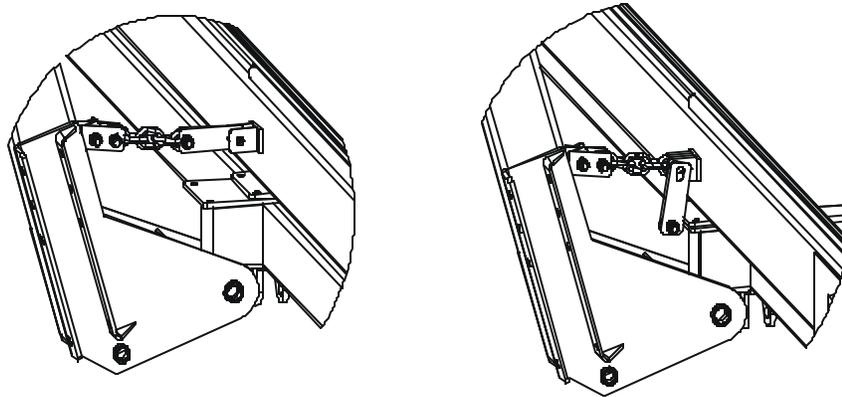

Figure 1 - Locks in Transport Position

1.2 Transporting Instructions

To ensure safe transport of the Bale Mover 700, forks should be in the transport position with the transport chains in place. To put transport chains in place, raise the forks until the transport pin can be put in place safely. Lower forks to take the slack up in the transport chains.

1.3 Bale Size Adjustment

The bale size is adjustable through the fork adjusting plate. By moving the forks (Figure 2), you adjust for the correct size of bale.

Figure 2 – Adjusting Forks

1.4 Field Instructions

For proper operation, the Bale Mover 700 should run at a field speed of 3-4 mph (4.8-6.5 km/h). When picking bales, a full stop is not required. Bales are picked and placed on the bed continuously by lifting the bale into position and moving the preceding bales back to fit the new bale on.

2.0 Maintenance Instructions

To ensure a long operating life of your Bale Mover 700, follow these maintenance procedures.

- Periodically check tire air pressure to maintain equal tire pressure. The operating tire pressure should be 90 psi.
- Periodically check all bolts for tightness.
- Periodically check the chain tightener. The chain should be just off the bottom of the rail. This can be seen through the sight hole in the rail.
- Grease the following points as described.

**Install inside motor hydraulic fittings before installing chain and chain tighteners.

The motors have been loosened so that the fittings can be turned into place.

The fittings go in the back port of the motors.

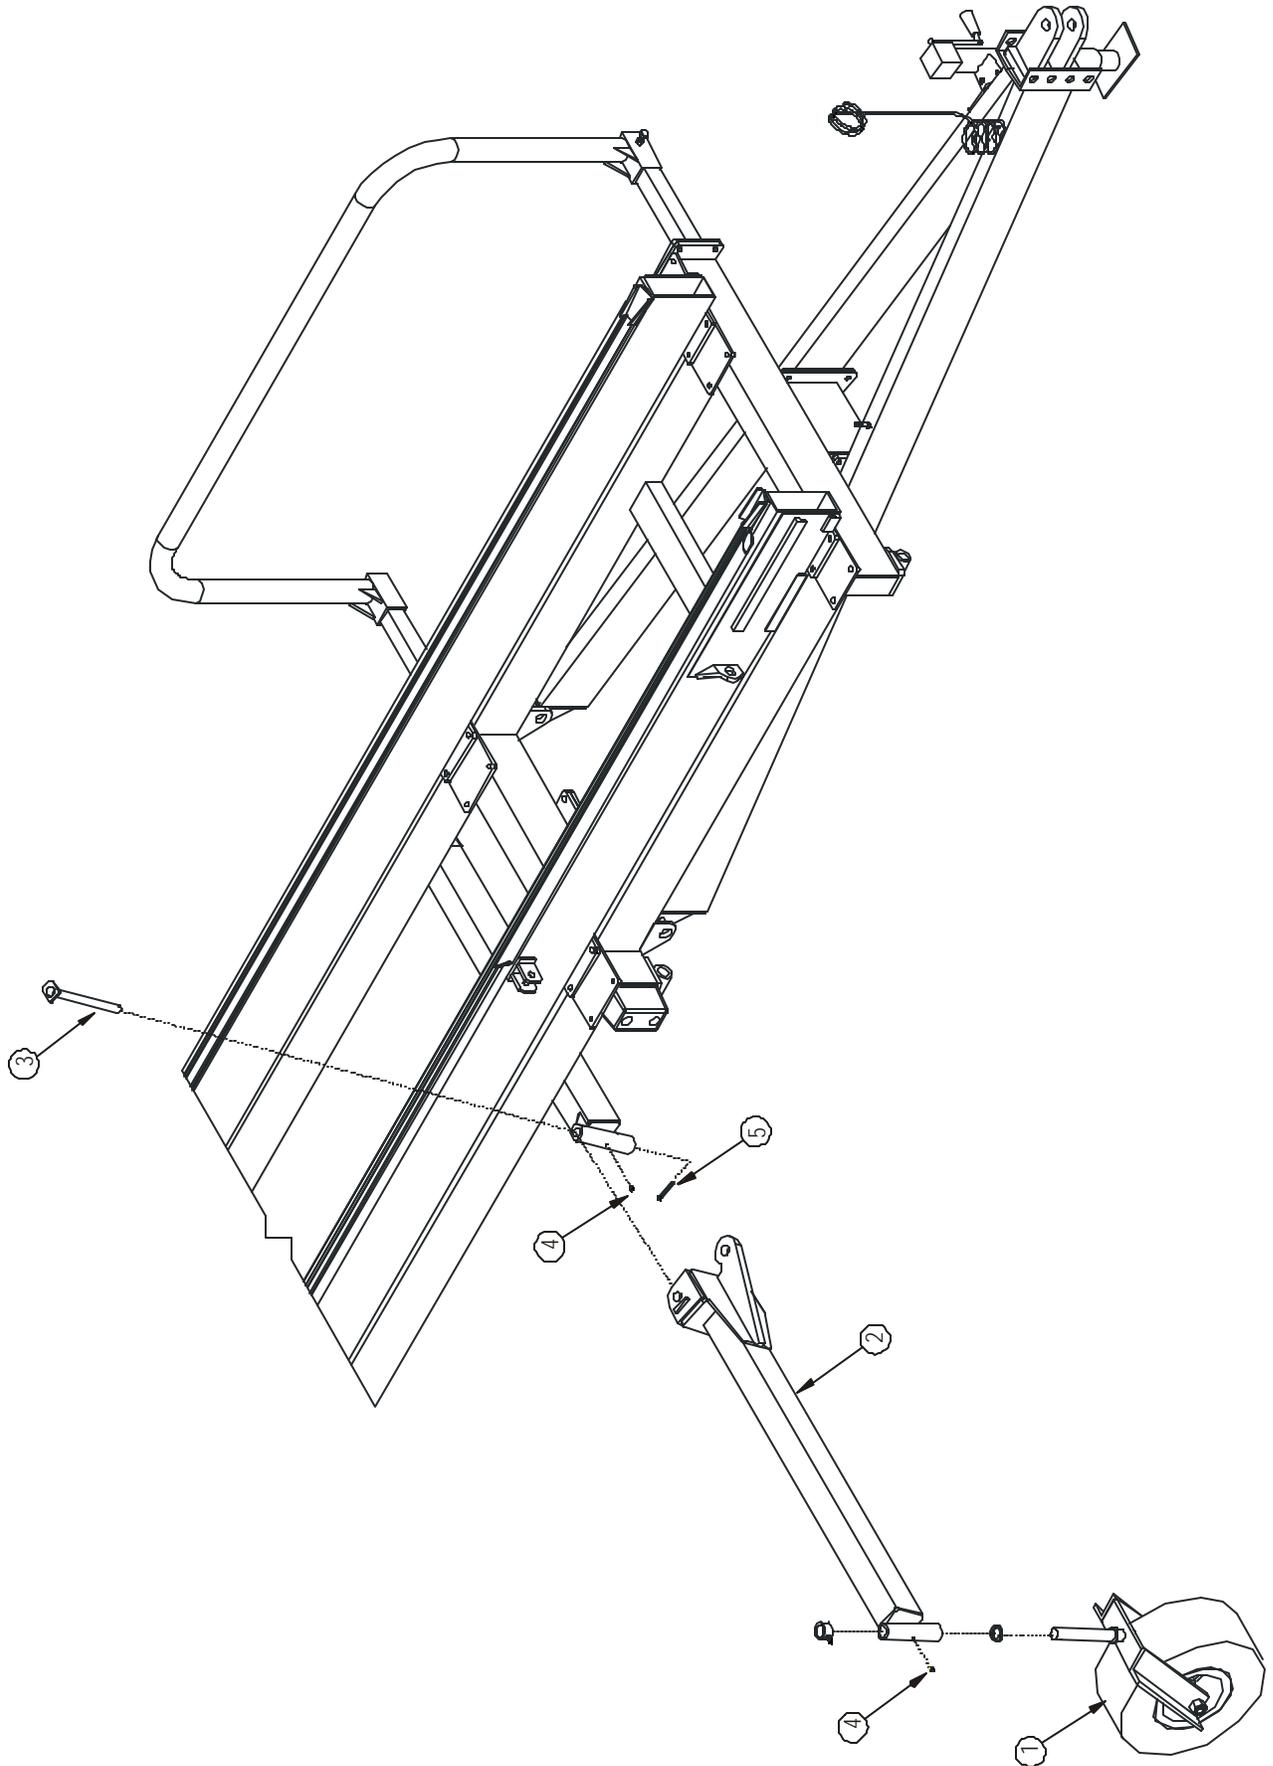

Chain is fed from the back of the machine. This is accomplished by feeding a piece of wire from the front through the tube and pulling the chain through. One person can do this, but two people make the operation easier.

The chain should be tightened so that the top of the chain is visible in the bottom of the sight hole in the rail.
