Warranty

HIGHLINE Mfg. Inc. warrants its product to the original owner for a period of two years from the date of purchase, subject to the following provisions:

First Year	Warranty covers parts and labour
Second Year	Warranty covers parts only

- “ Warranty registration must be submitted to Highline Mfg. Inc. within 30 days of purchase.
- “ Highline Mfg. Inc. is not liable for any damages to this equipment resulting from use that is inconsistent with this manual and such damages that are not covered under this warranty.
- “ Warranty will be void and Highline Mfg. Inc. will not be liable in any way if the equipment is used for any purpose other than the intended agricultural application.
- “ All warranty service must be handled through an authorized Highline Mfg. Inc. dealer. At the time of requesting warranty service, the purchaser must present evidence of the delivery date of the equipment. The purchaser shall pay any premium for requested overtime, any charge for making service calls, and any charges incurred in transporting the equipment to and from the location of the warranty service. Freight costs associated with warranty repairs are not reimbursable.
- “ A Highline Mfg. Inc. representative must authorize any labour subject to warranty before work is started.
- “ Warranty will be void if any component of this equipment is altered or modified in any way unless written permission is given by Highline Mfg. Inc.
- “ Equipment used for rental, custom work, industrial or construction use will not be warranted by Highline Mfg. Inc.
- “ Highline Mfg. Inc. will not assume any responsibility or liability for any damage occurring to the equipment to which Highline Mfg. Inc. equipment is attached.
- “ Warranty terms and conditions are subject to provincial and state legislation.
- “ Warranty is limited to the purchase price paid for the equipment up to the manufacturer’s suggested retail price. ANY WARRANTY LIABILITY RESULTING FROM THE WORKMANSHIP OF THIS EQUIPMENT is limited to the purchase price paid. Highline Mfg. Inc. assumes no responsibility whatsoever for warranty liability resulting from the misuse or improper operation and maintenance of this equipment.

President's Message

Congratulations on your purchase of the *Bale Pro 7000+*! Bale Pro, a proven name in livestock feed handling equipment, is manufactured by Highline Mfg. Inc. Highline Mfg. Inc. is a company with over 25 years experience in the farm implement industry.

This operator's manual has been prepared to provide information necessary for safe and efficient operation of your *Bale Pro 7000+*. In this manual you will find safety procedures, maintenance routines and detailed parts diagrams. This bale processor model was designed for controlled, aggressive processing with less bunching. A little time and effort spent following the recommended maintenance procedures will increase the performance and durability of your bale processor.

In order to maintain our high standards, improvements are made from time to time. Highline Mfg. Inc. reserves the right to make such changes and improvements when practical to do so without incurring any obligation to make those changes and improvements on previously sold machines.

Should the need arise, this manual will assist you in acquiring replacement parts. If your dealer does not have the parts you require in stock, they will be happy to order them for you. Also, if you find that you require information not covered in this manual, feel free to consult you local dealer or Highline Mfg. Inc.

Highline Mfg. Inc. thanks and congratulates you for choosing the *Bale Pro 7000+* as the livestock feed handling equipment for your needs.

*Raymond J. Bussière, President
Highline Mfg. Inc.*

*PO Box 307, Vonda, Saskatchewan, S0K 4N0
Phone 1-800-665-2010 Fax (306) 258-2010*

Safety Precautions

WORK SAFELY – FOLLOW THESE INSTRUCTIONS

CAREFUL OPERATION IS THE BEST INSURANCE AGAINST AN ACCIDENT!

- Keep children and adults away from discharge area while processing.
- Know the controls and what they do.
- Check the machine to ensure nothing restricts moving or rotating parts.
- Ensure PTO is disengaged before starting tractor.
- Never leave tractor while PTO is engaged.
- Lower forks to ground after operation.
- Never attempt to manually remove debris while the PTO is activated.
- Do not transport Bale Pro on highway with CV extension shaft on machine or with bales in tub or on the forks.
- Disconnect CV before unplugging or adjusting processor.
- Always keep safety shields in place.
- Relieve pressure in hydraulic lines before disconnecting lines or performing other work on the hydraulic system.
- Never allow anyone to stand behind the processor while loading bales.
- Ensure the discharge door is raised completely with tether pin installed to lock it to the tub when transporting machine.
- Use twine cutter tool only as directed. The blade is very sharp and could cause serious injury if handled improperly.

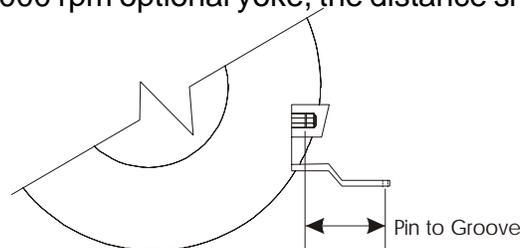

Before operating the Bale Pro 7000+, be sure to review *all* of the instructions and familiarize yourself with its features.

1.0 Operating Instructions

1.1 General Operating Instructions

Successful operation of the Bale Pro 7000+ is dependent upon the quality of the bale, the height of the feed rollers and flail guard rod and also upon the operator. The following steps ensure proper and efficient operation. Please read them all carefully before operating your new Bale Pro 7000+.

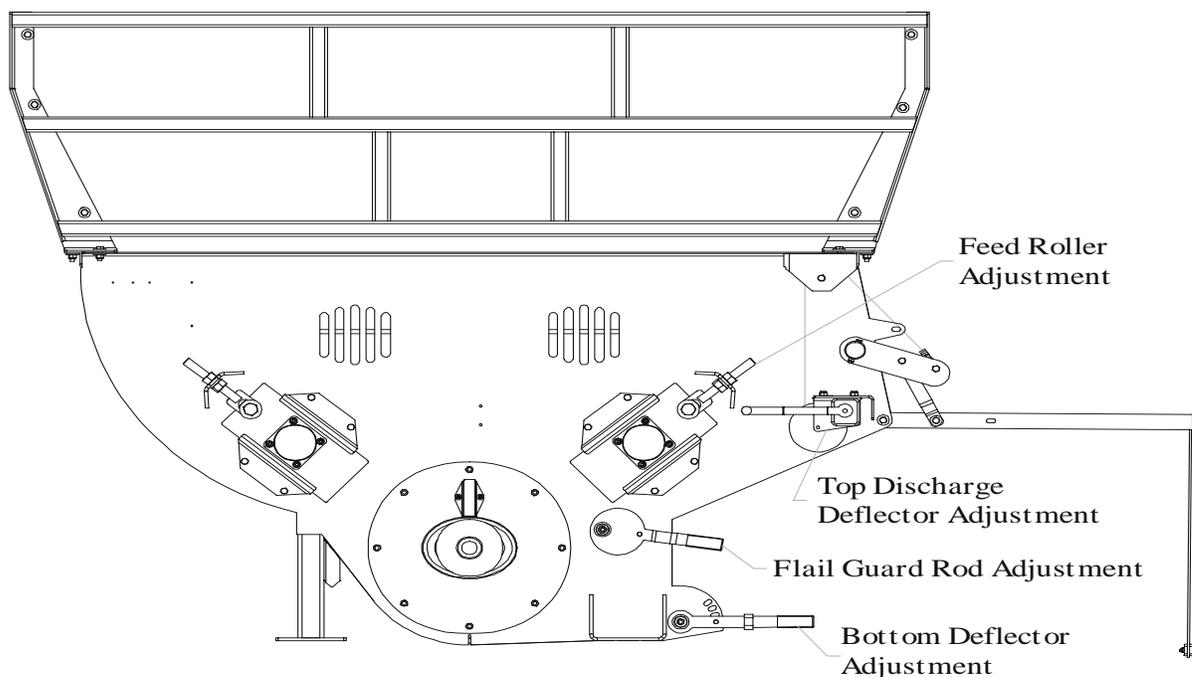

1. Ensure that the drawbar on the tractor is extended so that the pin is 17" from the groove on the PTO on the tractor for the standard 1-3/8" diameter, 1000 rpm yoke. If you have the 1-3/8" diameter, 540 rpm optional yoke, the distance should be 15-1/2". If you have the 1-3/4" diameter, 1000 rpm optional yoke, the distance should be 21-1/2".

2. It is recommended that the hitch tongue be placed in the second hole from the top of the BP 7000+ hitch frame. This will ensure proper drawbar location and extend the life of the CV.
3. Ensure that the machine stays properly greased at all recommended locations (See Maintenance Instructions).
4. The top discharge deflector is adjusted by means of the manual winch located at the front of the machine. Crank the winch clockwise to raise the deflector and counter clockwise to lower the deflector.
Note: After lowering the door, turn the winch handle clockwise until you hear it click twice. If you have the optional electric winch, follow the instructions included with the winch package.
5. To adjust the bottom deflector, simply stand in front of the machine, pull the handle toward yourself, and raise or lower the door as required.
6. The adjustment of the flail guard rods is similar to the bottom deflector adjustment. Pull the handle towards yourself and raise or lower the handle. Raising the handle will make the Bale Pro more aggressive while lowering the handle will make it less aggressive. There are five different settings for the flail guard rods as shown on the decal by the handle. If less aggressive settings are required, the flail guard rods can be adjusted to the top holes on the right hand side of the tub. If the processor is operated too aggressively, the flails will slap back on the flail drum. Continued 'backslap' can cause damage and unnecessary wear to the flail drum, flails, and flail bushings. Therefore, avoid excessive and prolonged 'backslap' whenever possible by adjusting the flail guard rods to a slightly less aggressive setting.
7. Adjust the feed rollers with the feed roller adjusting rods to accommodate the bale size. Generally the feed rollers should be raised for larger bales and lowered for smaller bales. Major adjustments may affect the aggressiveness of the processor.

8. Before loading the bale, engage the PTO to ensure that the flail drum is operating properly. Start feed rollers using the hydraulic controls and check to ensure the feed rollers turn in both directions. If your tractor has a hydraulic flow control, alter the flow so the feed rollers rotate at an equal speed for the condition of your bales.
9. To load bales, lower the forks **completely** and back up to the bale **slowly** until the forks are completely under the bale. Raise the forks until the bale falls into the processor. Another bale may be loaded onto the forks while a bale is in the processor. If a bale is loaded onto the forks while one is being shredded, raise the forks as high as possible, making sure the bale on the forks does not interfere with the bale already in the tub. Raising the forks will reduce the pressure on the hydraulic lift assembly. Orientation of the bale during loading causes the hay/straw to discharge differently. If the bale is shredded in the same direction in which it was baled, the hay/straw tends to come off in layers. If the bale is shredded in the opposite direction, feeding may be uneven.
10. **Do not dislodge frozen bales with forks. Damage to the lift mechanism may result. Likewise, do not use the twine cutter tool to dislodge jammed material.**
11. When ready, engage the tractor PTO at an idle. Increase the PTO speed until it reaches 1000rpm. Make sure that before the PTO is engaged, the forks are not interfering with the bale in the tub. To process bales, rotate the bale using the feed rollers. If the bale stops moving, reverse the direction of the feed rollers.
12. Before stopping the PTO, idle the tractor down to reduce flail 'backslap'.

WARRANTY WILL BE VOID IF ANY COMPONENT OF THIS MACHINE IS ALTERED OR MODIFIED IN ANY WAY WITHOUT WRITTEN PERMISSION FROM HIGHLINE MFG. INC.

1.2 Twine Removal Procedure

IT IS RECOMMENDED TO REMOVE THE TWINE FROM THE FLAIL DRUM EVERY 25 BALES. PREMATURE BEARING FAILURE CAN OCCUR IF TWINE IS ALLOWED TO BUILD UP ON THE FLAIL DRUM.

SHUT OFF THE TRACTOR ENGINE AND LET THE FLAIL ROTATION COME TO A COMPLETE STOP BEFORE ATTEMPTING TO REMOVE THE TWINE FROM THE FLAIL DRUM.

1. Ensure the forks are in the fully raised position. Lock the forks in the raised position with the cylinder lock.

2. Ensure the flail guard rod adjustment lever is NOT in position #5. Failure to do so will result in damage to the twine cutter blade.

3. Engage the flail drum lock and rotate the flail drum slowly from the discharge side until the flail drum is locked into position. If it is not possible to rotate the flail drum, the PTO must be disconnected from the tractor.

4. Ensure that no flails are obstructing the path of the knife on the flail drum. Failure to do so will result in damage to the twine cutter blade.

5. Lower the extension guide.

- 6. Remove the twine cutter from the storage position on the right side of the Bale Pro.

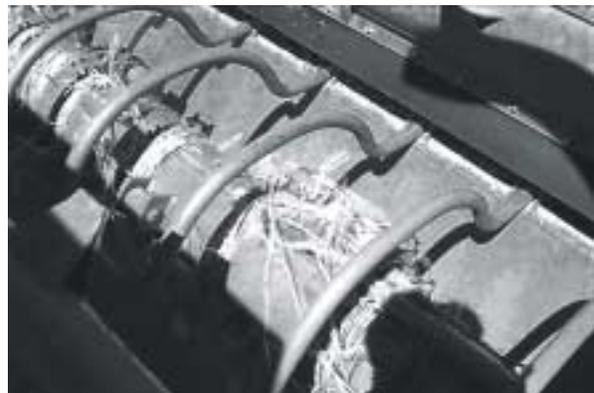

- 7. Align the twine cutter with the groove on the extension guide (Figure A). Slide the tool into the groove and cut through the twine in a saw-like action (Figure B).

Figure A

Figure B

- 8. After cutting through all of the twine wrapped around the entire length of the drum, remove the twine cutter and place it back into the storage position. Ensure the handle is locked into the spring clips.
- 9(a). Unlock the flail drum. Failure to do this will result in damage to the machine during start up.
- 9 (b). Lock the extension guide in the upright position.

10. Remove the twine from the flail drum on the discharge side of the Bale Pro.

11. Remove the hydraulic cylinder lock and store on the bale forks. Install the pin from the bottom side.

2.0 Maintenance Instructions

Please follow these maintenance procedures to ensure years of trouble free operation of your Bale Pro 7000+.

Twine must be removed from the flail drum *at least* every 25 bales. Premature bearing failure can occur if twine is allowed to build up on the flail drum.

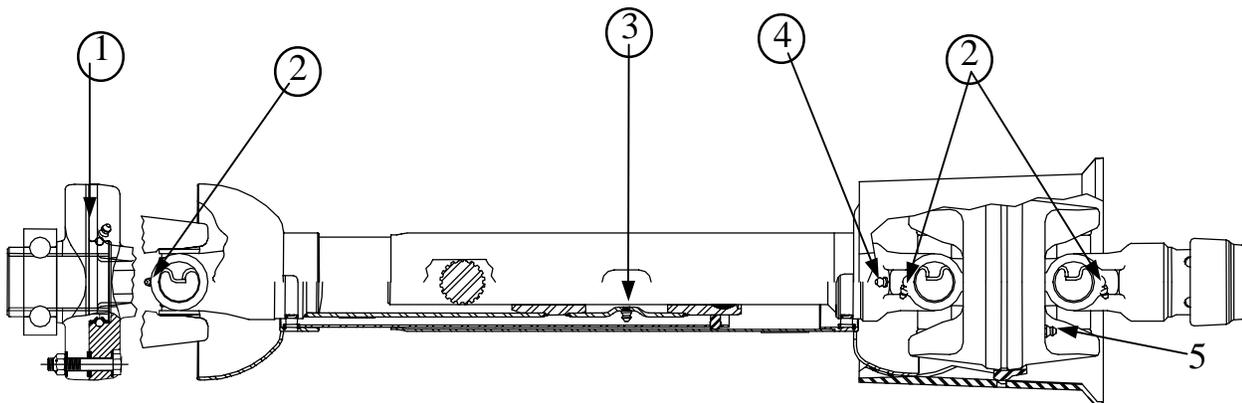

Flail bolts should be tightened after the first ten bales and rechecked after approximately 200 bales.

Casted pipe clamps for the bale forks should be checked every 50 bales and tightened if necessary.

Maintaining proper lubrication of the Bale Pro 7000+ is crucial for proper operation. Below is a list of the points and the frequency with which these points should be greased. Also shown are figures indicating the points that require lubrication.

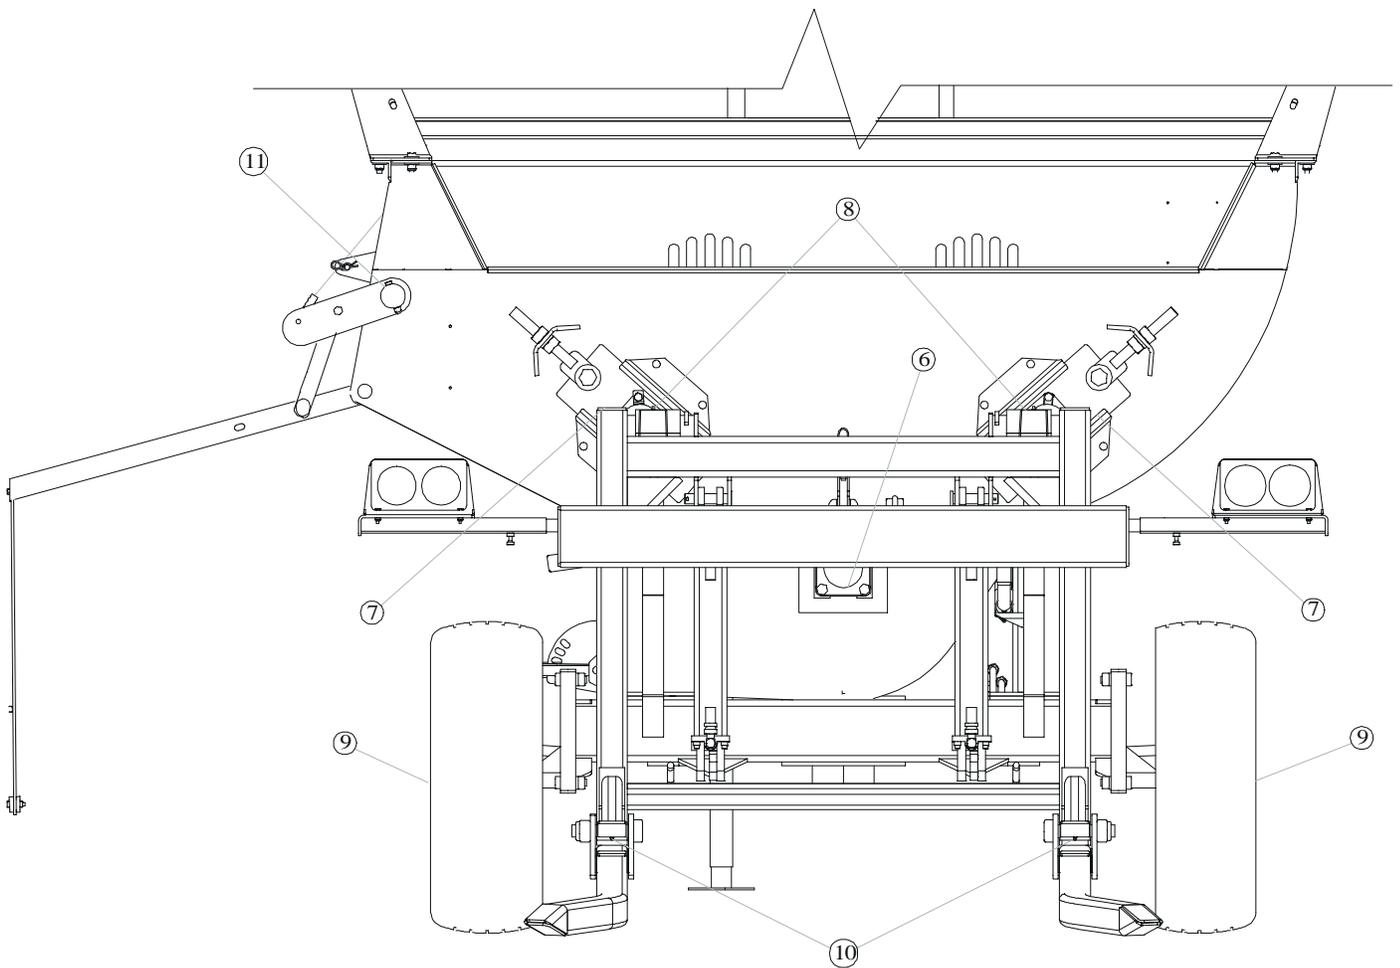

1. Ball Shear Assembly: Every eight hours.
2. Cross and Bearing: Every eight hours.
3. Telescopic Members: Every eight hours.
4. Ball and Socket: Every eight hours.
5. Center Housing: Every 24 hours.

***When the CV is under constant angle applications, there must be a lubrication interval of four hours for components 1 through 5.**

6. Flail Drum Bearings (Front and Rear): Every 50 bales.
7. Feed Roller Bearings (Left and Right): Every 100 bales.
8. Casted Pipe Clamps (Left and Right): Every 100 bales.
9. Wheel Hub Bearings (Left and Right): Every 100 bales.
10. Forks (Left and Right): Every 100 bales.
11. Discharge Deflector Pipe (Front and Rear): Every 100 bales.

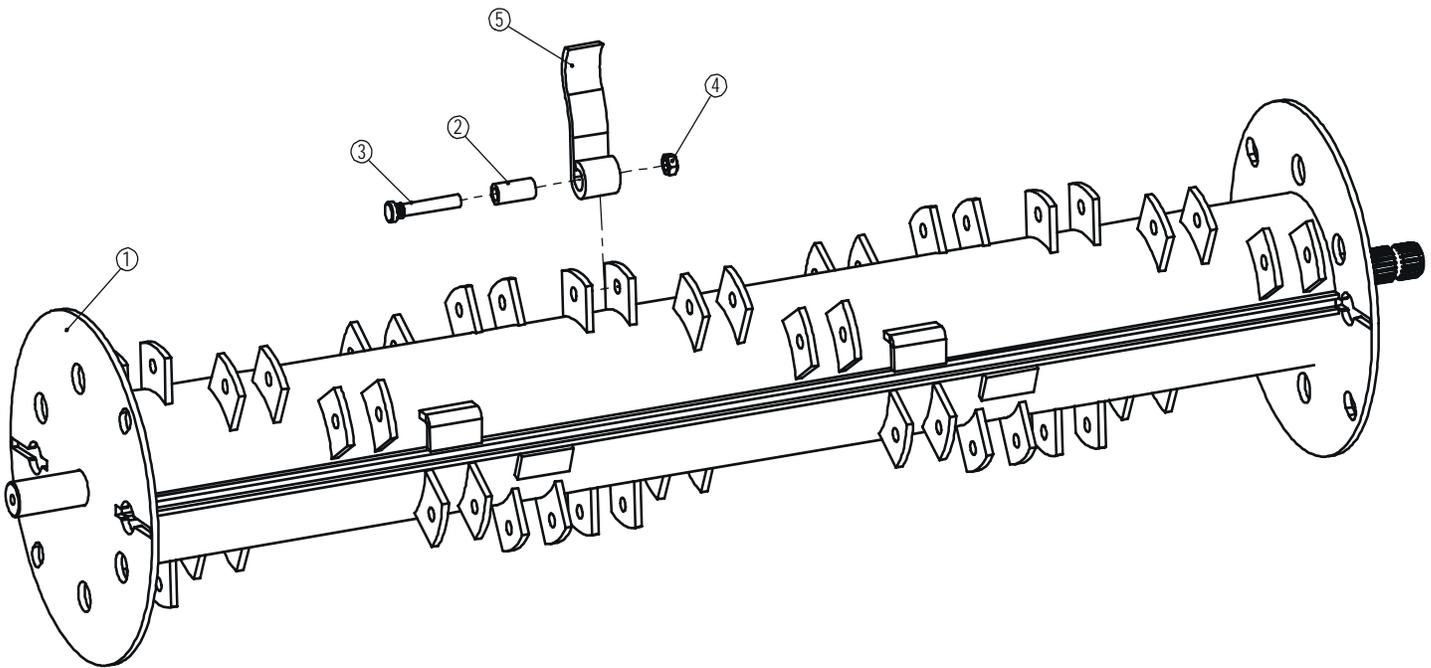

***Use low temperature grease when the temperature reaches below 0° Celsius (32° Fahrenheit).**

3.0 Parts Information

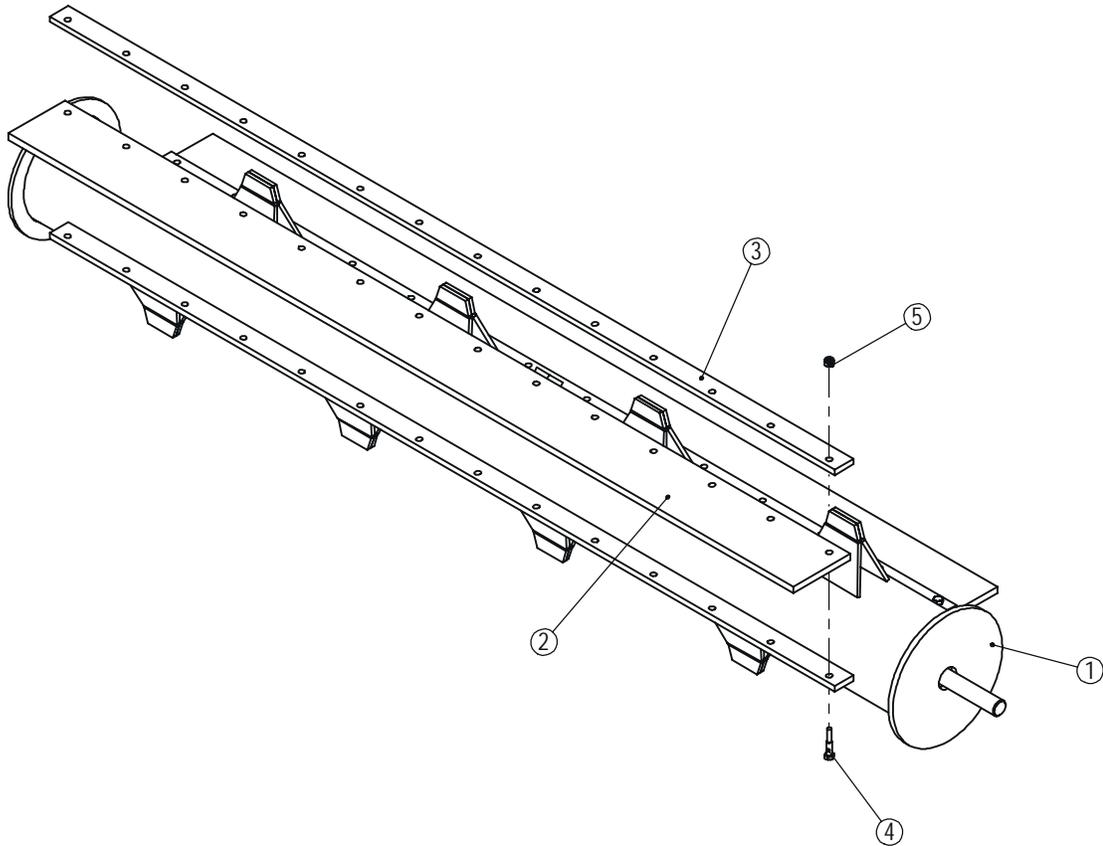

3.1 Flail Drum Assembly

ITEM NO.	PART NO.	DESCRIPTION	QTY.
1	49159	DRUM,FLAIL,WITH CUTTER	1

5.0 Specifications

Minimum Horse Power:	85 HP
Capacity:	2 bales - 6' long x 6' diameter
Flail Drum Length:	71"
Flail Drum Diameter:	24 1/4" Balanced
Flails:	26 - 7/16" x 6 7/16" Tempered Spring Steel
Tires:	2 - 11L X 15 Highway Service
Height:	105 - 1/2" (Fully Assembled)
Width:	106"
Length:	186 - 1/2"
Weight:	4200 lbs
Hitch Weight (Empty):	1380 lbs
Drawbar Weight (with bale in chamber):	2650 lbs
PTO Requirements:	1000 RPM PTO
Dual Hydraulics:	Dual remote, 2000 psi
Cylinders:	2 - 3" x 16", 1 1/2" Rod Diameter

6.0 Options

Big Tire Package:	Tires - 16.5L - 16.1 Hubs and Spindles - 5000 lbs Rim - 8 bolt, 6000 lbs.
Electric Winch Kit:	Raise and lower the discharge door from the cab of your tractor.
Field Lights:	2 lights, Shock absorbing, weather proof body, swivel mount.
Hydraulic Flow Control:	For controlling the speed of the Feed Rollers when the tractor does not have flow control capability.
EZ Feed:	28 Bushel tank with adjustable feed rate control (0-6 bushels per minute) and folding auger.

Dealer Checklist

Bale Pro Dealer Checklist

Check	Check List Item
	Flail rod adjustment handle moves freely and will hit all 5 adjustment holes.
	Bottom deflector door moves freely and will hit all 4 adjustment holes.
	Free and proper operation of winch and deflector door (full movement range).
	Transport pin for deflector door is installed.
	Position feed rollers on center of adjustment rod.
	Ensure all grease points are lubricated.
	Ensure lift assembly is against frame when cylinders are retracted.
	Guards installed on exposed rotating shafts (ie. rotor,feed rollers)
	Tail/warning lights are working.
	Check tire pressure and adjust as required.(as specified on tire)
	Ensure flail drum lock engages the flail drum in both positions and disengages freely.
	Ensure twine cutter can be passed through the full length of tub (both top/bottom of flail drum)
	Ensure twine cutter is secured with nylon tie straps in storage position for shipping.
	Tether pin for twine cutter extension guide is installed.
	Full library of manuals (operators, and parts) shipped w/machine. When applicable
	Mini operators manual tethered into plastic box. When applicable
	Perform a full 1000 rpm operation test of all components:
	- feed rollers (slide easily in slide retainers)
	- flail drum (not binding on twine guards)
	- flails not hitting tub or rods
	Feed Rollers turn in both directions (not binding).
	Ensure free movement of BP forks (not binding).
	Ensure cylinder transport lock fits with forks in transport position.
	Hydraulic motors to be operated and checked for leaks and free movement.
	Cycle all cylinders a minimum of 3 times, check for leaks and clearance problems.
