Warranty

Highline New Agricultural Equipment Limited Warranty

*Effective July 1, 2000 Two (2) Year / 24 Months
1st Year Parts and Labour –2nd Year Parts Only*

Highline Mfg. Inc (hereinafter "Highline") warrants each new Agricultural product of Highline's manufacturer to be free from defects in material and workmanship, under normal use and service for two (2) full years after initial purchase/retail sale. Highline will warrant its product for one (1) year parts and labour, if performed by a qualified Dealer and on the second year parts only. This Limited Warranty shall apply only to complete machines of Highline's manufacture, parts are covered by a separate Limited Warranty.

EQUIPMENT AND ACCESSORIES NOT OF HIGHLINE'S MANUFACTURE ARE WARRANTED ONLY TO THE EXTENT OF THE ORIGINAL MANUFACTURER'S WARRANTY AND SUBJECT TO THEIR ALLOWANCE TO HIGHLINE ONLY IF FOUND DEFECTIVE BY SUCH MANUFACTURER.

During the Limited Warranty period specified above, any defect in material or workmanship in any warranted item of Highline Agricultural Equipment not excluded below shall be repaired or replaced at Highline's option without charge by any authorized independent Highline Dealer. An authorized Dealer must make the warranty repair or replacement. Labour in accordance with Highline's labour reimbursement policy. Highline reserves the right to supply remanufactured replacement parts as it deems appropriate.

RETAIL PURCHASER RESPONSIBILITY: This Limited Warranty requires proper maintenance and periodic inspections of the Agricultural Equipment as indicated in the Operator's Manual furnished with each new Agricultural Equipment. The cost of routine or required maintenance and services is the responsibility of the retail purchaser. The retail purchaser is required to keep documented evidence that these services were performed. This Highline New Agricultural Equipment Limited Warranty may be subject to cancellation if the above requirements are not performed.

EXCLUSIONS AND LIMITATIONS

The warranties contained herein shall **NOT APPLY TO:**

- (1) Any defect which was caused (in Highline's sole judgement) by other than normal use and service of the Agricultural Equipment, or by any of the following: (i) accident (ii) misuse or negligence (iii) overloading (iv) lack of reasonable and proper maintenance (v) improper repair or installation (vi) unsuitable storage (vii) non-Highline approved alteration or modification (viii) natural calamities (ix) vandalism (x) parts or accessories installed on Agricultural Equipment which were not manufactured or installed by Highline authorized Dealers (xi) the elements (xii) collision or other accident.
- (2) Any Agricultural Equipment whose identification numbers or marks have been altered or removed.
- (3) Any Agricultural Equipment which any of the required or recommended periodic inspection or services have been performed using parts not manufactured or supplied by Highline or meeting Highline Specifications including, but without limitation, lubricants (oil, grease), belt lacings, and hydraulic fluids.
- (4) Equipment used for rental, custom work, industrial and construction or if equipment is used for any other purpose than the intended agricultural application.
- (5) Any Agricultural Equipment used in demonstrations not performed by a Highline Dealer. Warranty will be at the discretion of Highline for all other demonstration warranty.
- (6) **New Agricultural Equipment delivered to the retail purchaser in which the warranty registration has not been completed and returned to Highline within ten (10) days from the date of purchase.**
- (7) Any defect that was caused (in Highline's sole judgement) by operation of the Agricultural Equipment not abiding by standard operating procedures outlined in the Operator's Manual.
- (8) Tire Limited Warranties and support are the responsibility of the respective product's manufacturer.
- (9) Transportation costs, if any, of transporting to the Highline Dealer.
- (10) In no event shall Highline's liability exceed the purchase price of the product.
- (11) Highline shall not be liable to any person under any circumstances for any incidental or consequential damages (including but not limited to, loss of profits, out of service time and damage to equipment which this equipment may be attached) occurring for any reason at any time.
- (12) Diagnostic and overtime labour premiums are not covered under this Limited Warranty Policy.
- (13) Depreciation damage caused by normal wear, lack of reasonable and proper maintenance, failure to follow operating instructions, misuse, and/or lack of proper protection during storage.
- (14) Accessory systems and electronics not of Highline's manufacture are warranted only to the extent of such manufacturer's respective Limited Warranty if any.
- (15) Wear items which are listed by product group below:

COMMON WEAR ITEMS: roller chain, sprockets, clutches, shear bolts, clutch components, chains, gearbox housings bolts/torqued parts, flails, feed roller belting, coupler chain, DRV couplers, bogie wheels, apron tines and hoses.

PARTS WARRANTY

Parts replaced in the warranty period will receive the balance of the two year New Agricultural Equipment Limited Warranty. Replacement parts after the original machine warranty are warranted to be free from defects of material for ninety (90) days or the part will be repaired or replaced, without labour coverage for removal and reinstallation.

EXCLUSION OF WARRANTIES. UNLESS OTHERWISE REQUIRED BY LAW, AND EXCEPT FOR THE WARRANTIES EXPRESSLY AND SPECIFICALLY MADE HEREIN, HIGHLINE MAKES NO OTHER WARRANTIES, AND ANY POSSIBLE LIABILITY OF HIGHLINE HEREIN UNDER IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS, IMPLIED, OR STATUTORY, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANT ABILITY OR FITNESS FOR A PARTICULAR PURPOSE. HIGHLINE RESERVES THE RIGHT TO MODIFY, ALTER AND IMPROVE ANY PRODUCT WITHOUT INCURRING ANY OBLIGATION TO REPLACE ANY PRODUCT PREVIOUSLY SOLD WITH SUCH MODIFICATION. NO PERSON IS AUTHORIZED TO GIVE ANY OTHER WARRANTY, OR TO ASSUME ANY ADDITIONAL OBLIGATION ON HIGHLINE'S BEHALF.

President's Message

Congratulations on your purchase of the *Bale Pro 7000 HD-A* or *Bale Pro 7000 HDR-A*! Bale Pro, a proven name in livestock feed handling equipment, is manufactured by Highline Mfg. Inc. Highline Mfg. Inc. is a company with over 25 years experience in the farm implement industry.

This operator's manual has been prepared to provide information necessary for safe and efficient operation of your *Bale Pro 7000 HD-A* or *Bale Pro 7000 HDR-A*. In this manual you will find safety procedures, maintenance routines and detailed parts diagrams. This bale processor model was designed for controlled, aggressive processing with less bunching. A little time and effort spent following the recommended maintenance procedures will increase the performance and durability of your bale processor.

In order to maintain our high standards, improvements are made from time to time. Highline Mfg. Inc. reserves the right to make such changes and improvements when practical to do so without incurring any obligation to make those changes and improvements on previously sold machines.

Should the need arise, this manual will assist you in acquiring replacement parts. If your dealer does not have the parts you require in stock, they will be happy to order them for you. Also, if you find that you require information not covered in this manual, feel free to consult you local dealer or Highline Mfg. Inc.

Highline Mfg. Inc. thanks and congratulates you for choosing the *Bale Pro 7000 HD-A* or *Bale Pro 7000 HDR-A* as the livestock feed handling equipment for your needs.

*Chuck LePage, President
Highline Mfg. Inc.*

Safety Precautions

WORK SAFELY – FOLLOW THESE INSTRUCTIONS

CAREFUL OPERATION IS THE BEST INSURANCE AGAINST AN ACCIDENT!

- Keep children and adults away from discharge area while processing.
- Know the controls and what they do.
- Check the machine to ensure nothing restricts moving or rotating parts.
- Ensure PTO is disengaged before starting tractor.
- Never leave tractor while PTO is engaged.
- Lower forks to ground after operation.
- Never attempt to manually remove debris while the PTO is activated.
- Do not transport Bale Pro on highway with CV extension shaft on machine or with bales in tub or on the forks.
- Disconnect CV before unplugging or adjusting processor.
- Always keep safety shields in place.
- Relieve pressure in hydraulic lines before disconnecting lines or performing other work on the hydraulic system.
- Never allow anyone to stand behind the processor while loading bales.
- Ensure the discharge door is raised completely with transport lock installed to lock it to the tub when transporting machine.
- Use twine cutter tool only as directed. The blade is very sharp and could cause serious injury if handled improperly.

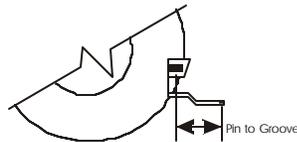

Before operating the Bale Pro 7000 HD-A or Bale Pro 7000 HDR-A, be sure to review *all* of the instructions and familiarize yourself with its features.

1.0 Operating Instructions

1.1 General Operating Instructions

Successful operation of the Bale Pro 7000 HD-A or Bale Pro 7000 HDR-A is dependent upon the quality of the bale, the height of the feed rollers and flail guard rod and also upon the operator. The following steps ensure proper and efficient operation. Please read them all carefully before operating your new Bale Pro 7000 HD-A or Bale Pro 7000 HDR-A.

1. Ensure that the drawbar on the tractor is extended so that the pin is 17" from the groove on the PTO on the tractor for the standard 1-3/8" diameter, 1000 rpm yoke. If you have the 1-3/8" diameter, 540 rpm optional yoke, the distance should be 15-1/2". If you have the 1-3/4" diameter, 1000 rpm optional yoke, the distance should be 21-1/2".

2. It is recommended that the hitch tongue be placed so that the Bale Pro 7000 HD-A or Bale Pro 7000 HDR-A frame is level. This will ensure that the bale forks are low enough to load a bale. Ensure adequate clearance to the PTO shaft.
3. Ensure that the machine stays properly greased at all recommended locations (See Maintenance Instructions).
4. The top discharge deflector door has a transport lock that must be released before the door can be lowered. Pull the handle of the transport lock towards the hitch end of the bale processor and rotate the pin of the transport lock out of the slot in the door to a position between the door and the tub body. The top discharge deflector door is operated by a hydraulic cylinder, which is linked to the feed roller hydraulic circuit. The selection of door function is determined by the position of the bale forks. The normal mode is for the feed roller to be operational, the door operation is enabled only when the bale forks are in the fully down position (a "fork down indicator" has been provided and is placed on the front of the hydraulic selector valve). With the selector valve shifted by the down position of the bale forks, the tractor hydraulic valve will control the door position cylinder.

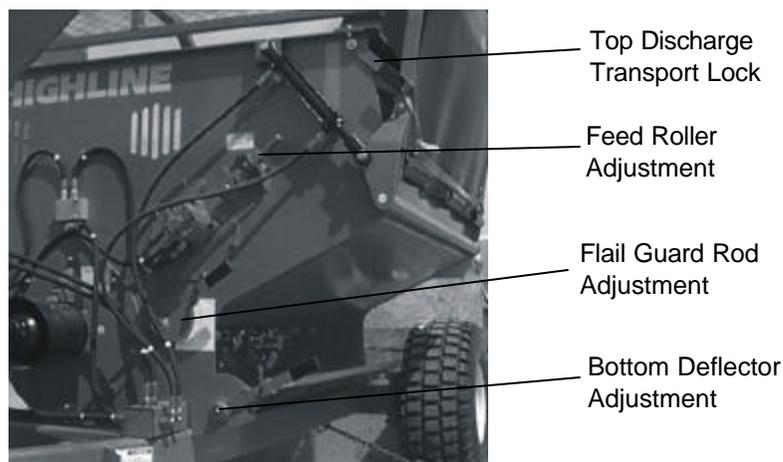

Note: The feed rollers should not operate with the bale forks in the full down position. If the feed rollers move while the door is actuated see Section 1.2 - Selector Valve Assembly Adjustment. The door cylinder and selector valve circuit are not "zero leakage" components and the weight of the door will cause the cylinder to slowly leak down over a long period of time. Use the door transport lock to prevent door leak down.

The door may drop a small amount (1/4") as the bale forks are brought to the fully down position and up again even if the door is not adjusted. This is caused by cross leakage inside the selector valve and should not be a problem except for repeated actuation of the selector valve. This leakage can be compensated for by noting the position of the door before raising the bale forks and adjusting the door height as required.

5. To adjust the bottom deflector, simply stand in front of the machine, pull the handle toward yourself, and raise or lower the door as required.
6. The adjustment of the flail guard rods is similar to the bottom deflector adjustment. Pull the handle towards yourself and raise or lower the handle. Raising the handle will make the Bale Pro more aggressive while lowering the handle will make it less aggressive. There are five different settings for the flail guard rods as shown on the decal by the handle. If less aggres-

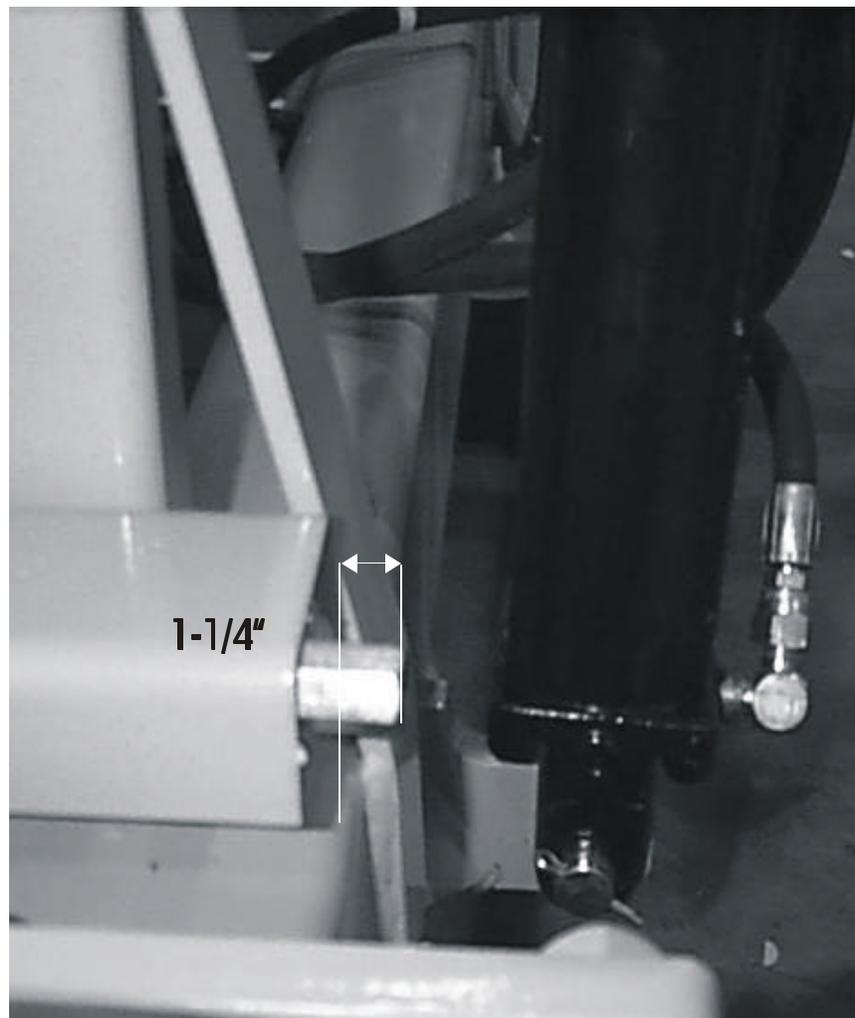

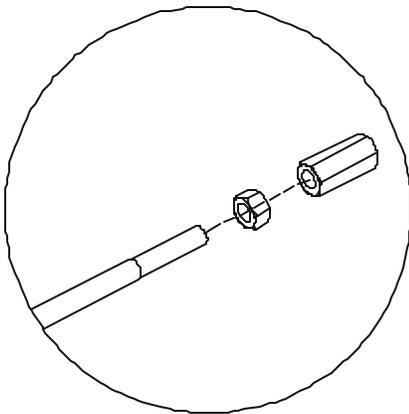

- sive settings are required, the flail guard rods can be adjusted to the top holes on the right hand side of the tub. If the processor is operated too aggressively, the flails will slap back on the flail drum. Continued 'backslap' can cause damage and unnecessary wear to the flail drum, flails, and flail bushings. Therefore, avoid excessive and prolonged 'backslap' whenever possible by adjusting the flail guard rods to a slightly less aggressive setting.
7. Adjust the feed roller position with the feed roller adjusting rods to accommodate the bale size. Generally the feed rollers should be raised for larger bales and lowered for smaller bales. Major adjustments may affect the aggressiveness of the processor.
 8. The feed roller speed should be set at approximately 40 rpm. This can be done by adjusting the flow control on the tractor (if it is equipped with a flow control). If you do not have a flow control on your tractor, a flow control kit can be purchased from your Highline dealer.
 9. Before loading the bale, engage the PTO to ensure that the flail drum is operating properly. Start feed rollers using the hydraulic controls and check to ensure the feed rollers turn in both directions. If your tractor has a hydraulic flow control, alter the flow so the feed rollers rotate at an equal speed for the condition of your bales.
 10. To load bales, lower the forks **completely** (fork indicator) and back up to the bale **slowly** until the forks are completely under the bale. Raise the forks until the bale falls into the processor. Another bale may be loaded onto the forks while a bale is in the processor. A "fork down indicator" has been provided to show when the forks are fully down. The indicator plate is located on the non-discharge frame member in front of the tub. The normally vertical indicator pops out 45° when the bale forks are fully down and can be seen from the tractor seat. If a bale is loaded onto the forks while one is being shredded, raise the forks as high as possible, making sure the bale on the forks does not interfere with the bale already in the tub. Raising the forks will reduce the pressure on the hydraulic lift assembly. Orientation of the bale during loading causes the hay/straw to discharge from the processor differently. If the bale is shredded in the same direction in which it was baled, the hay/straw tends to come off in layers. If the bale is shredded in the opposite direction, feeding may be uneven.
 11. **Do not dislodge frozen bales with forks. Damage to the lift mechanism may result. Likewise, do not use the twine cutter tool to dislodge jammed material.**
 12. When ready, engage the tractor PTO at an idle. Increase the PTO speed until it reaches 1000 rpm. Make sure that before the PTO is engaged, the forks are not interfering with the bale in the tub. To process bales, rotate the bale using the feed rollers. If the bale stops moving, reverse the direction of the feed rollers.
 13. Before stopping the PTO, idle down (tractors with PTO brakes) to reduce flail 'backslap'.

WARRANTY WILL BE VOID IF ANY COMPONENT OF THIS MACHINE IS ALTERED OR MODIFIED IN ANY WAY WITHOUT WRITTEN PERMISSION FROM HIGHLINE MFG. INC.

1.2 Selector Valve Assembly Adjustment

1. The selector rod assembly adjustment is preset at the factory to be 1-1/4" from the end of the coupling nut to the edge of the axle tube at the point of engagement on the small spring. This should shift the valve fully to the door circuit, and allow, while the forks are completely lowered, for discharge door operation without any feed-roller movement. As well, you should not be able to "pull" the selector valve forward at all.
2. If the above conditions are not met then the selector rod may need adjusting. In most cases the selector rod will need to be lengthened. This is done by raising the forks, loosening the jam nut and threading the coupling nut out (making the rod longer). The coupling nut should be adjusted in small increments, one full turn or 1/16" at a time. The jam nut should be retightened, and then the forks lowered and the circuit rechecked for proper operation. If the circuit is still not operating properly repeat the above steps until proper operation is achieved.
3. Large adjustments made to the selector rod without checking circuit operation may result in damage to the selector rod, valve, and springs.

1.3 Twine Removal Procedure

IT IS RECOMMENDED TO REMOVE THE TWINE FROM THE FLAIL DRUM EVERY 25 BALES. PREMATURE BEARING FAILURE CAN OCCUR IF TWINE IS ALLOWED TO BUILD UP ON THE FLAIL DRUM.

SHUT OFF THE TRACTOR ENGINE AND LET THE FLAIL ROTATION COME TO A COMPLETE STOP BEFORE ATTEMPTING TO REMOVE THE TWINE FROM THE FLAIL DRUM.

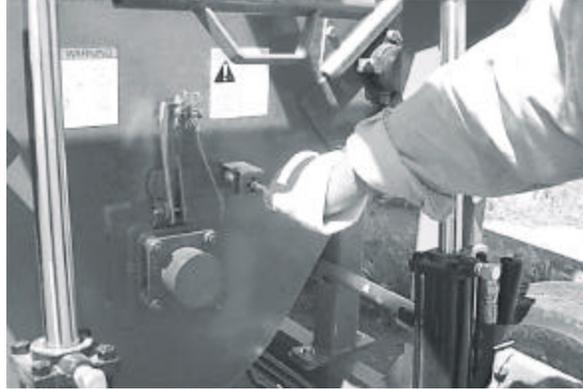

1. Ensure the forks are in the fully raised position. Lock the forks in the raised position with the cylinder lock.

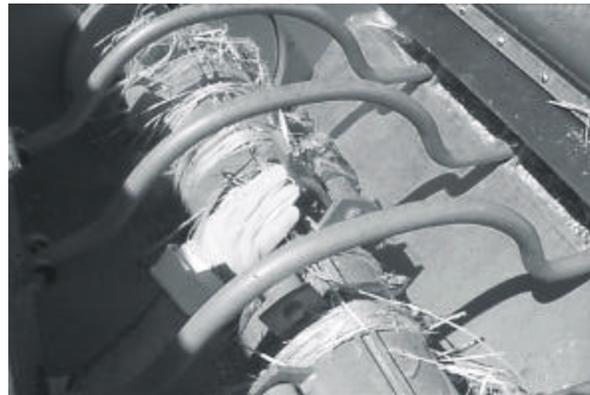

2. Ensure the flail guard rod adjustment lever is NOT in position #5. Failure to do so will result in damage to the twine cutter blade.

- Engage the flail drum lock and rotate the flail drum slowly from the discharge side until the flail drum is locked into position. If it is not possible to rotate the flail drum, the PTO must be disconnected from the tractor.

- Ensure that no flails are obstructing the path of the knife on the flail drum. Failure to do so will result in damage to the twine cutter blade.

- Lower the extension guide.

6. Remove the twine cutter from the storage position on the non-discharge side of the Bale Pro.

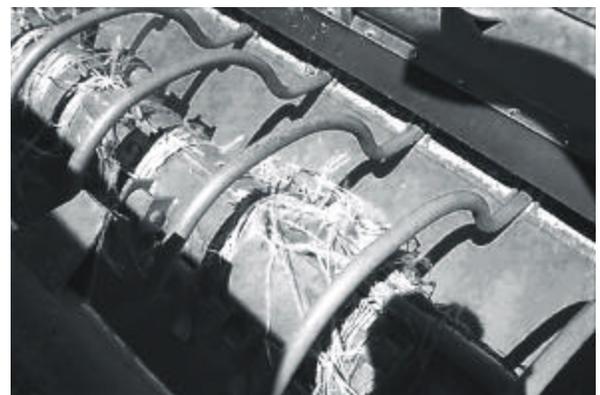

7. Align the twine cutter with the groove on the extension guide (Figure A). Slide the tool into the groove and cut through the twine in a saw-like action (Figure B).

Figure A

Figure B

8. After cutting through all of the twine wrapped around the entire length of the drum, remove the twine cutter and place it back into the storage position. Ensure the handle is locked into the spring clips.
- 9(a). Unlock the flail drum. Failure to do this will result in damage to the machine during start up.
- 9 (b). Lock the extension guide in the upright position.

10. Remove the twine from the flail drum on the discharge side of the Bale Pro.

11. Remove the hydraulic cylinder lock and store on the bale forks. Install the pin from the bottom side.

This page intentionally left blank.

2.0 Maintenance Instructions

Please follow these maintenance procedures to ensure years of trouble free operation of your Bale Pro 7000 HD-A or Bale Pro 7000 HDR-A.

Twine must be removed from the flail drum *at least* every 25 bales. Premature bearing failure can occur if twine is allowed to build up on the flail drum.

Flail bolts should be tightened after the first ten bales and rechecked after approximately 200 bales.

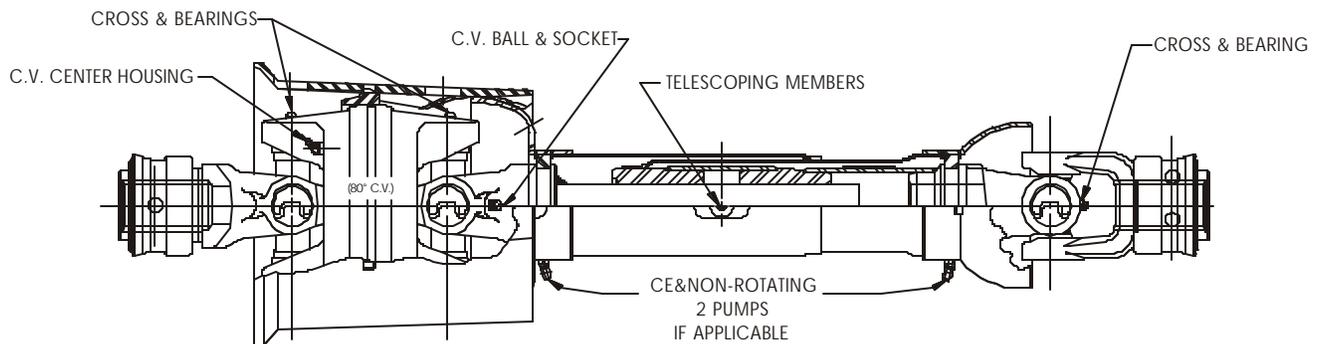

Casted pipe clamps for the bale forks should be checked every 50 bales and tightened if necessary.

Maintaining proper lubrication of the Bale Pro 7000 HD-A or Bale Pro 7000 HDR-A is crucial for proper operation. Lubricate all fittings with a good quality lithium soap base E.P. grease meeting the N.L.G.I. #2 specifications and containing no more than 1% molybdenum disulfide. An E.P. grease meeting the N.L.G.I. #2 specifications and containing 3% molybdenum disulfide may be substituted in the telescoping, CV Ball and socket, and CV centre housing member only. For applications operating below 0°F (-18°C) a good quality polyurea grease, meeting the N.L.G.I. #2 specifications and containing no more than 1% molybdenum disulfide, may be substituted for lubricating all fittings. Below is a list of the points and the frequency with which these points should be greased. Also shown are figures indicating the points that require lubrication. The first lube interval should be 16-24 hours of operation after initial start-up then follow the schedule below.

USE LEVER TYPE GREASE GUN

INTERVAL	LOCATION	AMOUNT
8 HRS**	CROSS AND BEARINGS	2-3 PUMPS
8 HRS	TELESCOPING MEMBERS	8-10 PUMPS
8 HRS**	CV BALL & SOCKET	4-6 PUMPS
24 HRS**	CV CENTER HOUSING	12-15 PUMPS

**Constant angle applications must have a lube interval of 4 hours.

CAUTION: REPLACEMENT PARTS ARE NOT LUBRICATED

Replacement parts must be lubricated at time of assembly. Use amount listed above per location then follow lube recommendations outlined above for lubing intervals.

- 1. Flail Drum Bearings (Front and Rear): Every 8 hrs.
- 2. Feed Roller Bearings (Left and Right): Every 16 hrs.
- 3. Casted Pipe Clamps (Left and Right): Every 16 hrs.
- 4. Wheel Hub Bearings (Left and Right): Every 16 hrs.
- 5. Forks (Left and Right): Every 16 hrs.
- 6. Discharge Deflector Pipe (Front): Every 16 hrs.

For more details on location see Section 3.1 - Grease Zerk Locations.

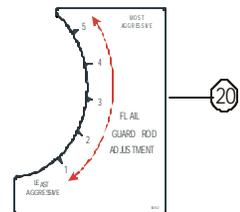

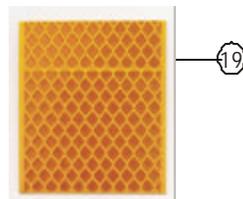

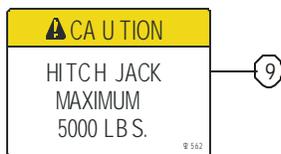

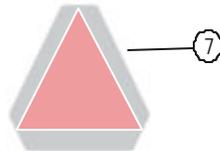

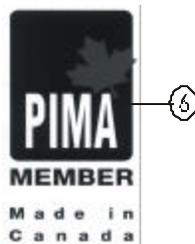

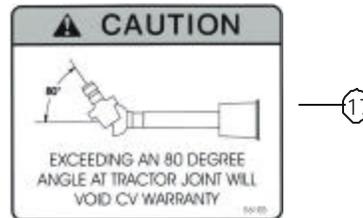

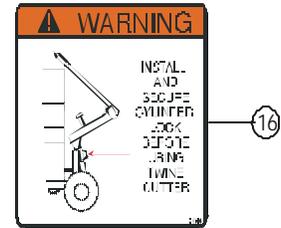

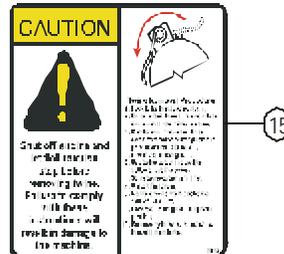

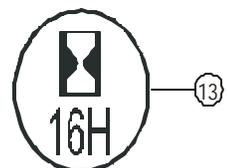

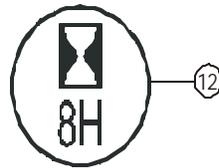

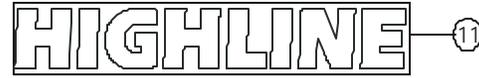

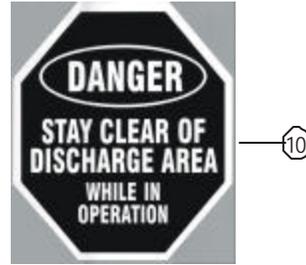

***Use low temperature grease when the temperature reaches below 0° Celsius (32° Fahrenheit).**

4.13.1 HDR Gearbox Installation Instructions

1. Install Item 3 on bearing housing. Use Item 12 (qty 2) to fasten it in place. Tighten securely.
2. Install gearbox shaft into internal spline as far as possible. ****Ensure that fill plug is facing up.****
3. Install Item 6 using fasteners Item 9 (qty 3) and 11 (qty 2). Use locking nuts to ensure that both ends of Item 6 are loose on these fasteners.
4. Pre-assemble Item 8 (qty 4) and Item 4 (qty 2) to Item 5 into Pre-assembly "A". Fasten with Item 18 (qty 2), 17 (qty 2), and 9 (qty 4). Tighten these fasteners until springs are compressed to 1-3/4". Install this Pre-assembly into the bottom of the gearbox using fasteners 11 (qty 2) and 15 (qty 2). Tighten these securely.
5. Install Item 2 (qty 2) on frame aligning its slots up with Item 4 slots in Pre-assembly "A". Fasten Item 2 (qty 2) to frame with Item 7 (qty 2) U-bolts and Item 14 nuts (qty 4). Tighten Item 2 brackets securely to frame.
6. Ensure gearbox box is level side to side on the frame.
7. Keeping box level install fasteners 10 (qty 4), 16 (qty 8), and 14 (qty 4) and tighten securely.
8. Loosen spring fasteners on full turn. Ensure that locking nuts are installed and tightened on Item 18.

5.2.1 Mounting Clearance Light Option

Please refer to Clearance Light Option on the previous page.

The clearance light kit you have purchased has the grommets (Item 9), lights (Item 7 & 8), and clips (Item 4) already installed in the light brackets (Item 3).

Plug wiring harness pin connectors into lights making sure that red lights are connected to the inside connector on each branch. The branches of the harness will be fastened to the rear wall of the tub after you mount the light brackets. See Figure C

The wiring harness is designed in the shape of a “Y”. The branches of the wire harness mount on the tub wall in different positions depending on the discharge model you have purchased. The HD model has the longer branch on the discharge side; the HDR has the longer branch on the non-discharge side. The longer branch of the harness has excess wire for the EZ Feed Option. If you do not have this option, wrap the excess harness inside the light bracket. (To determine excess harness position light in its mount location; it should be approx 16”). See Figure A

Fasten the light brackets to the tub ears on the rear wall (see Figure C) with the fasteners provided. Bolt (Item10) and washer (Item 13). See Figure B

As shown in Figure B, fasten the wiring harness to the tub using the fasteners and holes provided, keeping the bolt heads to the inside of the tub. Leave the fasteners loose so you can adjust the harness later. Bolt (Item 11), clamp (Item 6), and nut (Item 12)

After connecting the wire harness to the rear wall locate the hydraulic lines running under the tub. See Figure D, there are extra positions available in the hydraulic line clamps to run the harness to the front of the Bale Pro. Loosen the hydraulic line clamp (30210) and install the wire harness as shown. Install (Item 2, Fig D) in the opposing clamp hole as a spacer to keep the clamp vertical.

Plug wire harness into the tractor plug and check that the lights are operating correctly.

Tighten all fasteners down securely after adjusting harness for proper slack.

5.9.1 Electric/Hydraulic Selector Valve Option Installation Instructions

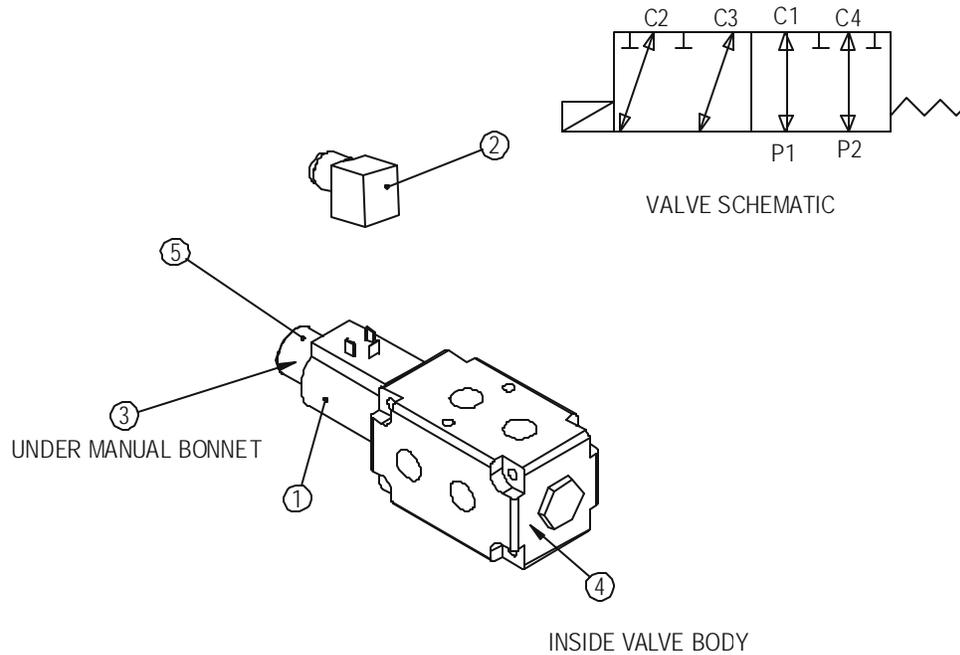

1. Unhook hoses from the selector valve located on mount angle or tub wall (depending on model) in front of tub.
2. The selector rod is no longer needed. The rod can be disassembled from the machine by removing the jam and coupling nut located on the rear end of the rod (located under protective cover at rear of main frame and just in front of fork lift frame).
3. Pull the selector rod out the front of the tub wall.
4. Mount Electric/Hydraulic assembly in previous valves location as shown in the drawing on previous page.
5. Re-attach hoses as shown in the photograph below.
6. Connect wiring harness to the valve keeping the harness connector body in the orientation shown in the drawing and photograph. The harness end should point to the tub wall.
7. Route the wire harness through hose holder to the front of the processor.
8. Run the harness to the tractor and mount the switch in a suitable location.
9. Route the red wire to the tractors accessory power and the black wire to ground. You may need to adjust the length of the red and black wire that are inside the loom for easier routing.

When unhooking from processor use quick disconnect.

5.9.2 Electric/Hydraulic Selector Valve (Part No. 33201)

7.0 Specifications

Minimum Horse Power:	85 HP
Capacity:	2 bales - 6' long x 6' diameter - max. 2000 lbs each
Flail Drum Length:	71"
Flail Drum Diameter:	24 1/4" Balanced
Flails:	26 - 7/16" x 6 7/16" Tempered Spring Steel
Tires:	2 - 11L X 15 Highway Service (Inflate to 45 psi)
Floatation Tires (Optional):	2 - 16.5LX 16.1 Softrac (Inflate to 24 psi)
Height:	105 - 1/2" (Fully Assembled)
Width:	106"
Length:	186 - 1/2"
Weight:	4200 lbs
Hitch Weight (Empty):	1380 lbs
Drawbar Weight (with bale in chamber):	2650 lbs
PTO Requirements:	1000 RPM PTO
Dual Hydraulics:	Dual remote, 2000 psi
Cylinders:	2 - 3" x 16", 1 1/2" Rod Diameter

Dealer Checklist

Bale Pro Dealer Checklist

Checked	Check List Item
	Flail rod adjustment handle moves freely and will hit all 5 adjustment holes.
	Bottom deflector door moves freely and will hit all 4 adjustment holes.
	Free and proper movement of selector rod.
	Transport lock for deflector door is installed and functional.
	Position feed rollers - Discharge 3 1/8" - top of Acme rod to top of lug.
	Non-discharge 4 5/8" - top of Acme rod to top of lug.
	Ensure all grease point decals are installed
	Ensure lift assembly is against frame when cylinders are retracted.
	Guards installed on exposed rotating shafts (ie. rotor,feed rollers)
	Tail/warning lights installed and functional . When applicable
	Gearbox filled with oil. When applicable
	Check tire pressure and adjust as required.(See Specifications - page 75)
	Ensure flail drum lock engages the flail drum in both positions and disengages freely.
	Ensure twine cutter can be passed through the full length of tub (both top/bottom of flail drum)
	Ensure twine cutter is secured with nylon tie straps in storage position for shipping.
	Gripper clip for extension guide is installed and functional.
	Full library of manuals (operators, and parts) shipped w/machine. When applicable
	Mini operators manual tethered into plastic box. When applicable
	Perform a full 1000 rpm operation test of all components:
	- feed rollers (slide easily in slide retainers)
	- flail drum (not binding on twine guards)
	- discharge door activates (when dump is down)
	- feed rollers activate (when dump is up)
	- flails not hitting tub or rods
	Feed Rollers turn in both directions-unison (same direction)
	Ensure free movement of BP forks (not binding).
	Ensure cylinder transport lock fits with forks in transport position.
	Hydraulic motors to be operated and checked for leaks and free movement.
	Cycle all cylinders a minimum of 3 times, check for leaks and clearance problems.
