## Warranty

### **Highline New Agricultural Equipment Limited Warranty**

*Effective July 1, 2000 Two (2) Year / 24 Months*

*1st Year Parts and Labour – 2nd Year Parts Only*

Highline Mfg. Inc (hereinafter "Highline") warrants each new Agricultural product of Highline's manufacturer to be free from defects in material and workmanship, under normal use and service for two (2) full years after initial purchase/retail sale. Highline will warrant its product for one (1) year parts and labour, if performed by a qualified Dealer and on the second year parts only. This Limited Warranty shall apply only to complete machines of Highline's manufacture, parts are covered by a separate Limited Warranty.

**EQUIPMENT AND ACCESSORIES NOT OF HIGHLINE'S MANUFACTURE ARE WARRANTED ONLY TO THE EXTENT OF THE ORIGINAL MANUFACTURER'S WARRANTY AND SUBJECT TO THEIR ALLOWANCE TO HIGHLINE ONLY IF FOUND DEFECTIVE BY SUCH MANUFACTURER.**

During the Limited Warranty period specified above, any defect in material or workmanship in any warranted item of Highline Agricultural Equipment not excluded below shall be repaired or replaced at Highline's option without charge by any authorized independent Highline Dealer. An authorized Dealer must make the warranty repair or replacement. Labour in accordance with Highline's labour reimbursement policy. Highline reserves the right to supply remanufactured replacement parts as it deems appropriate.

**RETAIL PURCHASER RESPONSIBILITY:** This Limited Warranty requires proper maintenance and periodic inspections of the Agricultural Equipment as indicated in the Operator's Manual furnished with each new Agricultural Equipment. The cost of routine or required maintenance and services is the responsibility of the retail purchaser. The retail purchaser is required to keep documented evidence that these services were performed. This Highline New Agricultural Equipment Limited Warranty may be subject to cancellation if the above requirements are not performed

**EXCLUSIONS AND LIMITATIONS**

The warranties contained herein shall **NOT APPLY TO:**

- (1) Any defect which was caused (in Highline's sole judgement) by other than normal use and service of the Agricultural Equipment, or by any of the following: (i) accident (ii) misuse or negligence (iii) overloading (iv) lack of reasonable and proper maintenance (v) improper repair or installation (vi) unsuitable storage (vii) non-Highline approved alteration or modification (viii) natural calamities (ix) vandalism (x) parts or accessories installed on Agricultural Equipment which were not manufactured or installed by Highline authorized Dealers (xi) the elements (xii) collision or other accident.
- (2) Any Agricultural Equipment whose identification numbers or marks have been altered or removed.
- (3) Any Agricultural Equipment which any of the required or recommended periodic inspection or services have been performed using parts not manufactured or supplied by Highline or meeting Highline Specifications including, but without limitation, lubricants (oil, grease), belt lacings, and hydraulic fluids.
- (4) Equipment used for rental, custom work, industrial and construction or if equipment is used for any other purpose than the intended agricultural application.
- (5) Any Agricultural Equipment used in demonstrations not performed by a Highline Dealer. Warranty will be at the discretion of Highline for all other demonstration warranty.
- (6) **New Agricultural Equipment delivered to the retail purchaser in which the warranty registration has not been completed and returned to Highline within ten (10) days from the date of purchase.**
- (7) Any defect that was caused (in Highline's sole judgement) by operation of the Agricultural Equipment not abiding by standard operating procedures outlined in the Operator's Manual.
- (8) Tire Limited Warranties and support are the responsibility of the respective product's manufacturer.
- (9) Transportation costs, if any, of transporting to the Highline Dealer.
- (10) In no event shall Highline's liability exceed the purchase price of the product.
- (11) Highline shall not be liable to any person under any circumstances for any incidental or consequential damages (including but not limited to, loss of profits, out of service time and damage to equipment which this equipment may be attached) occurring for any reason at any time.
- (12) Diagnostic and overtime labour premiums are not covered under this Limited Warranty Policy.
- (13) Depreciation damage caused by normal wear, lack of reasonable and proper maintenance, failure to follow operating instructions, misuse, and/or lack of proper protection during storage.
- (14) Accessory systems and electronics not of Highline's manufacture are warranted only to the extent of such manufacturer's respective Limited Warranty if any.
- (15) Wear items which are listed by product group below:

**COMMON WEAR ITEMS:** roller chain, sprockets, clutches, shear bolts, clutch components, chains, gearbox housings bolts/torqued parts, flails, feed roller belting, coupler chain, DRV couplers, bogie wheels, apron tines and hoses.

**PARTS WARRANTY**

Parts replaced in the warranty period will receive the balance of the two year New Agricultural Equipment Limited Warranty. Replacement parts after the original machine warranty are warranted to be free from defects of material for ninety (90) days or the part will be repaired or replaced, without labour coverage for removal and reinstallation.

**EXCLUSION OF WARRANTIES.** UNLESS OTHERWISE REQUIRED BY LAW, AND EXCEPT FOR THE WARRANTIES EXPRESSLY AND SPECIFICALLY MADE HEREIN, HIGHLINE MAKES NO OTHER WARRANTIES, AND ANY POSSIBLE LIABILITY OF HIGHLINE HEREIN UNDER IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS, IMPLIED, OR STATUTORY, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. HIGHLINE RESERVES THE RIGHT TO MODIFY, ALTER AND IMPROVE ANY PRODUCT WITHOUT INCURRING ANY OBLIGATION TO REPLACE ANY PRODUCT PREVIOUSLY SOLD WITH SUCH MODIFICATION. NO PERSON IS AUTHORIZED TO GIVE ANY OTHER WARRANTY, OR TO ASSUME ANY ADDITIONAL OBLIGATION ON HIGHLINE'S BEHALF.

## **President's Message**

Thank you for your recent purchase of the Turbo Grain Conveyor, the fastest 10" conveyor. The Turbo Grain Conveyor is the only conveyor to combine gentle handling with auger-like speed. With proper maintenance, the Turbo Grain Conveyor will provide years of outstanding performance.

This Operator's Manual has been prepared to provide information necessary for the safe and efficient operation of your Turbo Grain Conveyor. In it, you will find safety procedures, maintenance routines, and detailed parts diagrams.

In order to maintain our high standards, changes or improvements are made from time to time. Highline Mfg. Inc. reserves the right to make changes and add improvements when practical to do so without incurring any obligation to make such changes on previously sold machines.

Should the need arise, this manual will assist you in acquiring replacement parts. If your dealer does not have the parts you need in stock, they will be happy to order them in for you. Feel free to contact Highline Mfg. Inc. or your local dealer if you need information that is not included in this manual.

Highline Mfg. Inc. would like to thank you again for entrusting your grain handling needs to the Turbo Grain Conveyor.

*Chuck LePage, President  
Highline Mfg. Inc.*

## **Safety Precautions**

### **WORK SAFELY – FOLLOW THESE INSTRUCTIONS**

***CAREFUL OPERATION IS THE BEST INSURANCE AGAINST AN ACCIDENT!***

** Before operating the Turbo Grain Conveyor, be sure to review *all* of the instructions and familiarize yourself with its features.**

- Keep yourself and others clear of rotating parts to prevent injury.
- Exercise extreme caution while loading or unloading grain.
- Never attempt to manually remove debris while the PTO is engaged. Disengage the PTO before unplugging the Turbo Grain Conveyor.
- Relieve pressure in hydraulic lines before disconnecting lines or performing any maintenance on the hydraulic system.
- Keep away from the discharge and intake area while moving material.
- Know all of the controls and what they do.
- Check machine to ensure nothing restricts the moving or rotating parts.
- Ensure PTO is disengaged before starting tractor.
- Lower the conveyor to the ground and place on frame support after operation.
- Do not transport conveyor on highway with any material in the conveyor. Ensure hitch is in transport mode and transport lock is in place before transporting unit.
- Do not operate without safety shields and guards in place.
- Do not stand on any guards.
- Lower conveyor when transporting to prevent contact with overhead lines.
- Make sure the ball valve is closed after raising the Turbo Grain Conveyor and open before lowering.

## **1.0 Operating Instructions**

### **1.1 Transporting Instructions**

The conveyor hydraulic hitch has two operating conditions. The first is the working mode as shown in Figure 1.1(a). The hitch is set in this position to move the conveyor around the yard and into bin position. The second mode is for transport as shown in Figure 1.1(b) and Figure 1.1(c). The transport mode is used when the conveyor will be moved longer distances or for highway travel.

To switch from transport to working mode the conveyor must first be supported by the jack. the transport lock pin can then be removed and the transport lock can be mounted in its storage position as shown in Figure 1.1(a). To operate in transport mode for the side drive conveyor, place the transport lock and pin in the orientation shown in Figure 1.1(b). The hitch cylinder must be fully extended for the lock to fit in place. For the direct drive conveyor, place the transport lock and pin in the orientation shown in Figure 1.1(c). The driveline slips down onto the stub shaft that extends from the transport lock. This will secure the driveline in place.

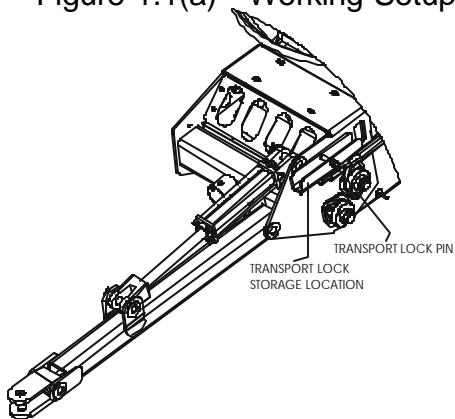

Figure 1.1(b) - Side Drive Transport

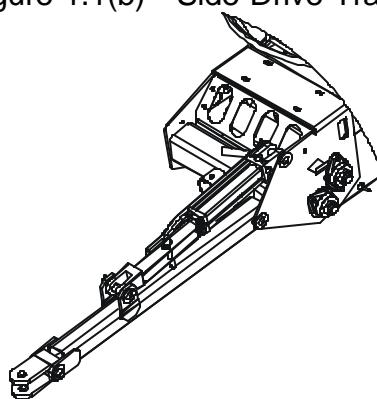

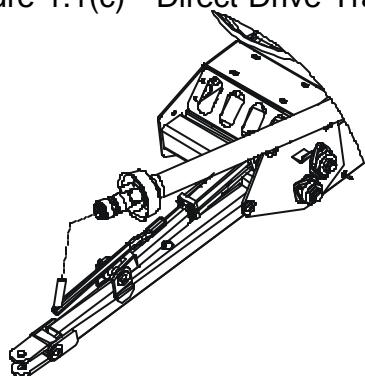

Figure 1.1(c) - Direct Drive Transport

### **1.2 Pre-Operation Instructions**

Prior to operating the Turbo Grain Conveyor with material in it, operate it empty to familiarize yourself with the hydraulic controls and ensure the conveyor belt is centered. If the belt is not centered make the adjustments as described below to center it.

### 1.Belt Alignment

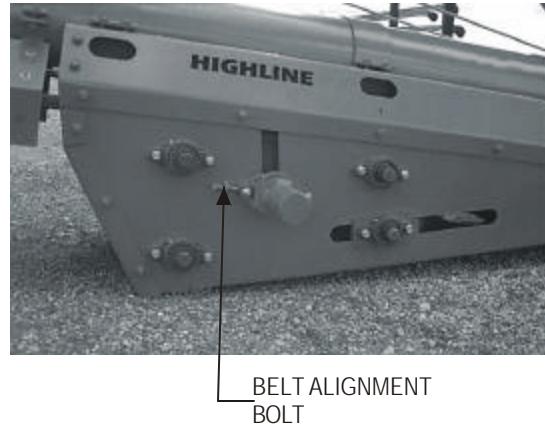

Run the Turbo Grain Conveyor at tractor idling speed without product to adjust (center) the belt. There are two locations where belt adjustment may be required. These adjustment points are the intake and drive. If the belt is running off to one side, begin with the intake adjustment (Figure 1.2(a)). Loosen the two 3/4" nuts on the roller bearing flange. If the belt is running to the right (passenger side) tighten the square head adjusting bolt. If the belt is running off to the left (driver's side), loosen the bolt. When the belt is running straight retighten the nuts. If the belt is still not running correctly, check the alignment of the belt going into the drive box. If the belt is running off to one side follow the same procedure as outlined above to adjust the drive roller (Figure 1.2(b)). These steps may have to be repeated to bring both adjustment points to alignment.

Note: When belt is in operation, some travel may occur in a side to side manner on the rollers. The acceptable tolerance is approximately 3/4" overall.

**Figure 1.2(a)**  
**Belt Tracking Adjustment - Intake**

**Figure 1.2(b)**  
**Belt Tracking Adjustment - Drive**

Note: When the Conveyor is run for the first time, the skirting in the intake will show signs of wear and may heat up and smoke. This break-in period is common and may last up to 4 hours of operation. If it lasts longer than that time, please contact your dealer or Highline Representative.

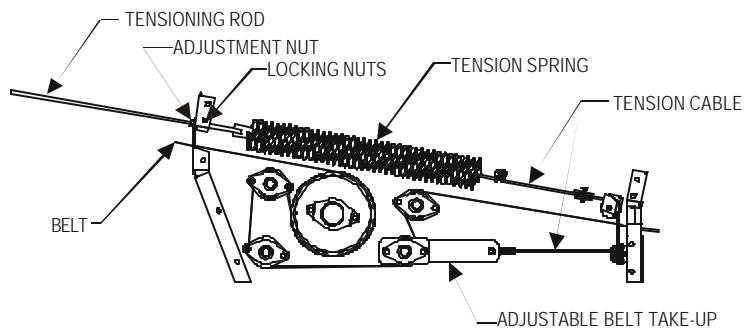

## 2. Belt Tension

Belt tension is set at the factory and should not need adjustment. If however after running the conveyor, it is found to be slipping under some conditions tension can be increased by following the procedure set out below.

To start, turn back the two  $\frac{1}{2}$ " locking nuts (1" at a time) on the tensioning rod (Figure 1.2(d)) located on the inside of the drive box. The outside  $\frac{1}{2}$ " adjustment nut can then be tightened down to the inside nuts. Test the conveyor for belt slippage and repeat this procedure until the belt does not slip.

**If the belt still slips and there is no adjustment left on the tensioning rod, a section of the belt can be removed and the tensioning system reset. This will need to be done by a qualified technician.**

**Figure 1.2(d) - Belt Tensioning System**

### 1.3 General Operating Instructions

Watch the conveyor belt to ensure that it is centered on all rollers. If it is not centered, refer to the Pre-operation Instructions for directions on how to center the belt.

The main roller shaft (PTO output) should run between 500 and 600 rpm. **Do not exceed a PTO speed of 600 rpm!**

At no time should the belt be allowed to slip on the main drive roller. If slippage occurs, **IMMEDIATELY** shut down the conveyor, determine where the problem has occurred and correct it.

If the Turbo Grain Conveyor belt slips with material in the tube, stop the machine and evenly and slowly re-engage the PTO.

If the Turbo Grain Conveyor belt stops due to overfilling of a bin, clear the material from the discharge. Restart the conveyor slowly, making sure the belt does not slip on the drive roller.

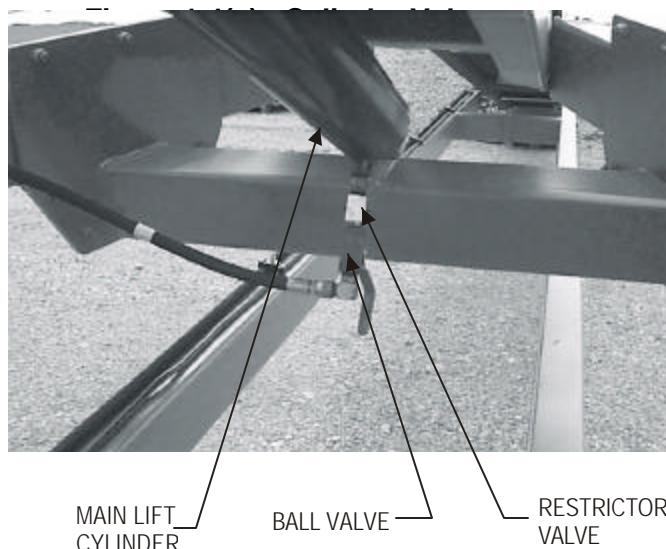

Never transport the conveyor with material in the tube.

**Watch for overhead lines. Always lower the conveyor when moving. Maintain a minimum of 10' between the conveyor and overhead lines at all times.**

Place the spout of the conveyor 3" above the bin opening. Never rest the spout on the bin opening.

A restrictor valve is used on the main lift cylinder to prevent the cylinder from compressing quickly if a hose fails (Figure 1.4(a)). A ball valve has also been added to prevent the oil flow from lowering the Turbo Grain Conveyor into the bin.

**Always engage the ball valve if the conveyor is being used or stored in an elevated position.**

Stand clear of the conveyor when raising or lowering.

Do not spill or allow oil to come into contact with the belt.

Do not run the conveyor without shields in place.

Keep all nuts, bolts, bearing lock collars, etc. tight at all times.

#### 1.4 Cable Adjustment

Adjustment of the cable should be done very carefully. The cables can be adjusted at the four eye bolts (Figure 1.5), making sure to loosen the cable clamps at the top of all trusses before adjusting. When tightening cables, do not tighten more than three revolutions per side before rechecking.

**Side to Side Adjustment:** Tightening one side more than the other will result in a twisting of the tube. This will limit the capacity of the conveyor as well as cause the belt to bind, reducing the life of the belt. To determine whether or not the conveyor is straight, look up the center of the tube while the conveyor is in the transport position. If the spout is too far to the right, tighten the cables on the left. If the spout is over to the left, tighten the cables on the right.

**Up and Down (Horizontal) Adjustment:** Proper cable tension will limit the amount of sag in the conveyor and will reduce tube deflection while being loaded and transported. To check the horizontal straightness of the tube, lower the conveyor to the transport position and look up the tube from the intake end. The cables should be tightened evenly so the tube is straight (or has a slight upward shape near the discharge end). Periodically check if the tube is straight, especially before and after transporting the conveyor over long distances.

**Figure 1.5 - Cable Tensioner**

### **1.5 Slow Moving Vehicle Sign Placement**

The slow moving vehicle sign is to be placed on the left hand side of the machine (Figure 1.6) for transport purposes.

**Figure 1.6 - SMV Sign**

## **2.0 Maintenance Instructions**

To ensure a long operating life of your Turbo Grain Conveyor, follow these maintenance procedures.

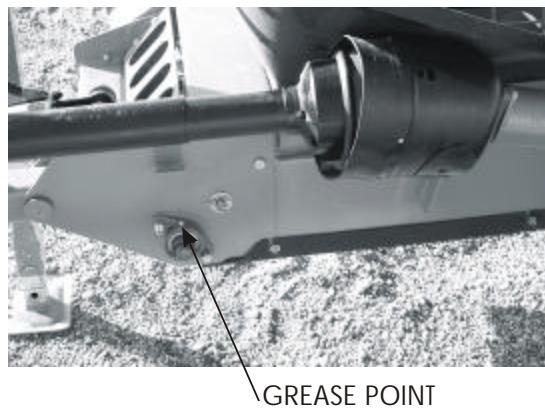

- Periodically check all bolts for tightness.
- Periodically inspect belt splice for signs of wear and tear.
- Periodically check belt alignment and adjust as required.
- Grease points as described below.
- Ensure tire air pressure is maintained at rated psi. Fluctuation in the air pressure may result in damage to the tire.

### **2.1 Grease Locations**

### 5. Direct Drive Bearing

#### **Direct Drive Gearbox**

Check oil level in gearbox after every 40 hours of use. Use EP80W90 oil in gearbox. Maximum quantity oil - 28 oz. (Note: Normal operating temperature is between 70-80°C).

#### **Drive Chain Lubrication**

Use an industrial grade spray-on lubricant to lubricate the roller chain. Maintain every 100 hours.

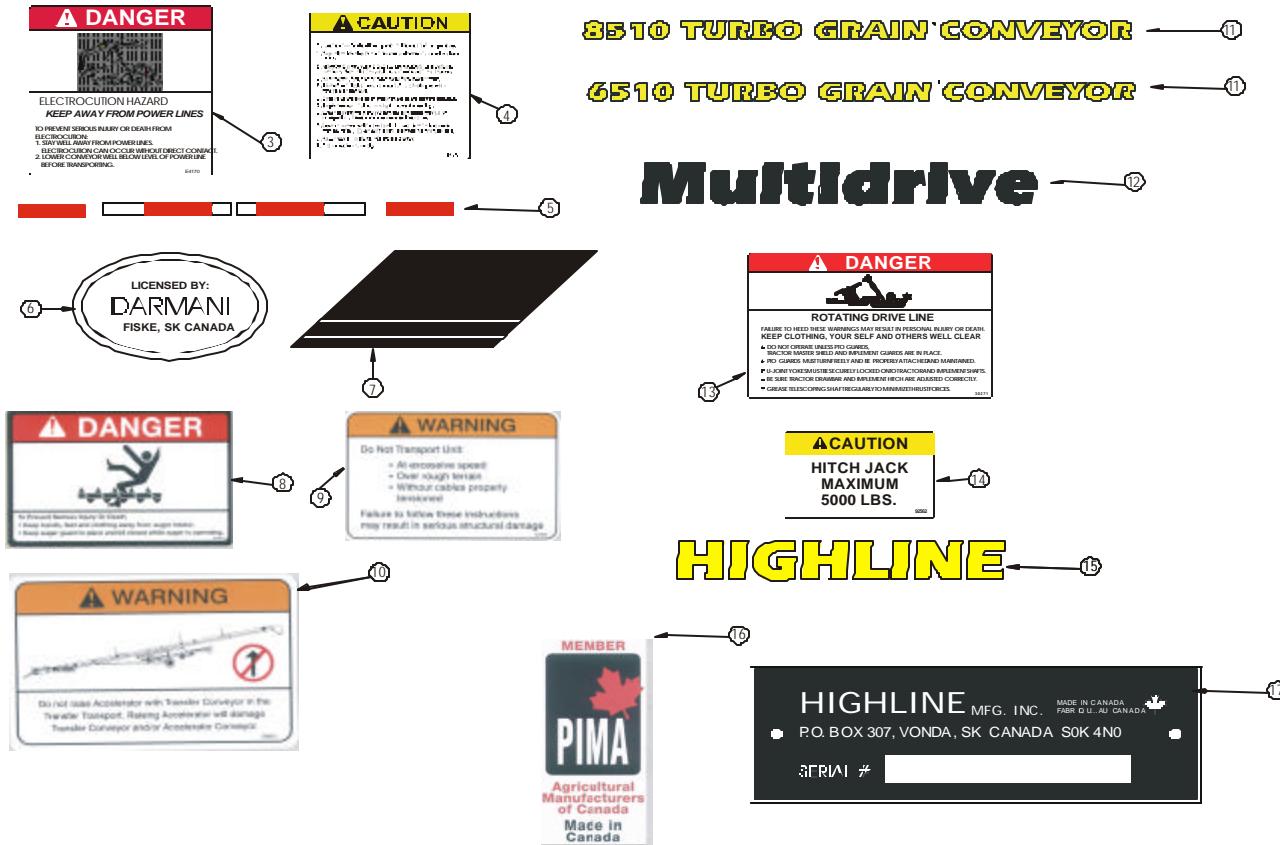

#### **Auger Drive Gearbox**

This gearbox is grease lubricated. Only if the gearbox is overheating (above 100°C) or there is obvious signs of grease leaking out of the gearbox, should the gearbox require maintenance. This should be checked every 100 hours. Use NLF100EP grease if required.
